CORPORATE LAND & BIODIVERSITY INDEX · V1.1

Who presses hardest on nature, per rupee earned?

India's 500 largest listed companies, compared only with their own sector peers, on what they themselves report.

500	373	16	FY26	1,897
COMPANIES	RANKED	PEER GROUPS	DATA YEAR	SOURCED VALUES

Draft for review · ILDC 2026, Bhubaneswar · not for publication
Data: BRSR and financial filings, FY2025-26

For every rupee a company earns, how much pressure does it put on nature?

CLBI compares each company only with its own sector, on three pressures it reports itself: greenhouse gases, water and waste.

A RANK MEANS

Among its sector peers, the company reported the **lowest pressure per rupee of revenue** in FY2025-26, on climate, water and waste together.

A RANK DOES NOT MEAN

- a small footprint in absolute terms
- a biodiversity-impact or risk score
- an ESG rating, or a ranking across sectors
- that any company has done something wrong

A cement maker is never compared with a bank. Every comparison is within the sector.

Six rules we did not bend

01
Company data only

Ranks use only what companies themselves report. Nothing estimated or modelled enters a rank; a blank stays blank.

02
Every number traceable

Each value carries its link, page or filing field, and the exact quote when taken from a report.

03
Like with like

Ranked only within a sector, and only where at least 10 companies have complete data.

04
Simple, open maths

Anyone can reproduce every score; the dataset recomputes all 500 with spreadsheet formulas.

05
Doubtful values held back

A value that looks wrong is not scored until the company confirms it, even if it is printed.

06
Credit never offsets

Restoration, recycling and renewables earn a few points; they never cancel emissions or water use.

If a number cannot be traced to the company's own disclosure, it does not enter a rank.

From 500 companies to 373 peer comparisons

500

Universe: NSE's 500 largest by average market cap, Jan–Jun 2026 (AMFI)

470

In sectors with 10 or more companies (NSE 22-sector classification; finance split into sub-groups)

437

In the 16 peer groups where at least 10 companies have complete data

373

Ranked: climate, water and waste all reported, no open query, revenue year matched

WHY 64 IN RANKED GROUPS ARE NOT RANKED

19
a reported zero awaiting confirmation

19
a metric not reported

14
a value held back as a data query

12
revenue year not matched to BRSR

Financial Services is ranked in sub-groups and shown separately: offices only, not what banks finance.

Three pressures in the rank, air pollution alongside

All from the Business Responsibility and Sustainability Report (BRSR, Principle 6) that every listed company files. Revenue from the same year's financial filing, on the same boundary.

An independent recheck of 40 report-sourced values matched 38 exactly.

WEBSITE: EVERY VALUE, ONE CLICK AWAY

A printed number is not automatically a true number

Three rules hold a value back. It stays in the dataset, flagged, and is restored when the company confirms it.

29

Extreme values

More than 300× above or below the peer median, per ₹ crore. Usually kilograms entered as tonnes, or head-office-only boundaries. Climate 3 · water 3 · waste 13 · air 10.

2

Physically impossible

Scope 2 implying more grid electricity than the company’s whole revenue could buy. One printed Scope 2 is 147× the company’s own previous year.

30

Reported zeros

Companies with a zero climate, water or waste total, or a zero Scope 1 or Scope 2 alone, across the 500. For an operating company, zero usually means ‘not measured’.

A company with a held-back climate, water or waste value is not ranked until it is resolved.

Simple enough to check by hand: ACC, cement

Divide by revenue, line up peers from lowest to highest, score 100 to 0, average the three, add a small credit, rank.

01 · INTENSITY	02 · POSITION	03 · CLIMATE SCORE	04 · THREE SCORES	05 · PRESSURE SCORE	06 · + CREDIT	07 · FINAL SCORE
593.5	**3rd**	**80**	**80/80/50**	**70.0**	**+5.6**	**75.6**
tCO2e per ₹ crore 15,293,369 ÷ 25,766	lowest of 11 cement companies on climate	100 × (11 − 3) ÷ 10	climate · water · waste	simple average	planting 2 · recycling 3.0 renewables 0.6	rank **#2 of 11**; credit does not change its place

Element score = 100 × (companies reporting − position) ÷ (companies reporting − 1). Ties share the average position. The dataset's 'Calculations' sheet repeats this with live formulas for all 500 companies: every rank matches.

One very large or very small value cannot distort anyone else's score: only the order matters.

Credit rewards effort, capped at 10 points, and never offsets pressure

RESTORATION · TIER A

5 places

largest move from credit (Capital Goods, Healthcare)

13 of 16

groups where nobody gains more than 2 places

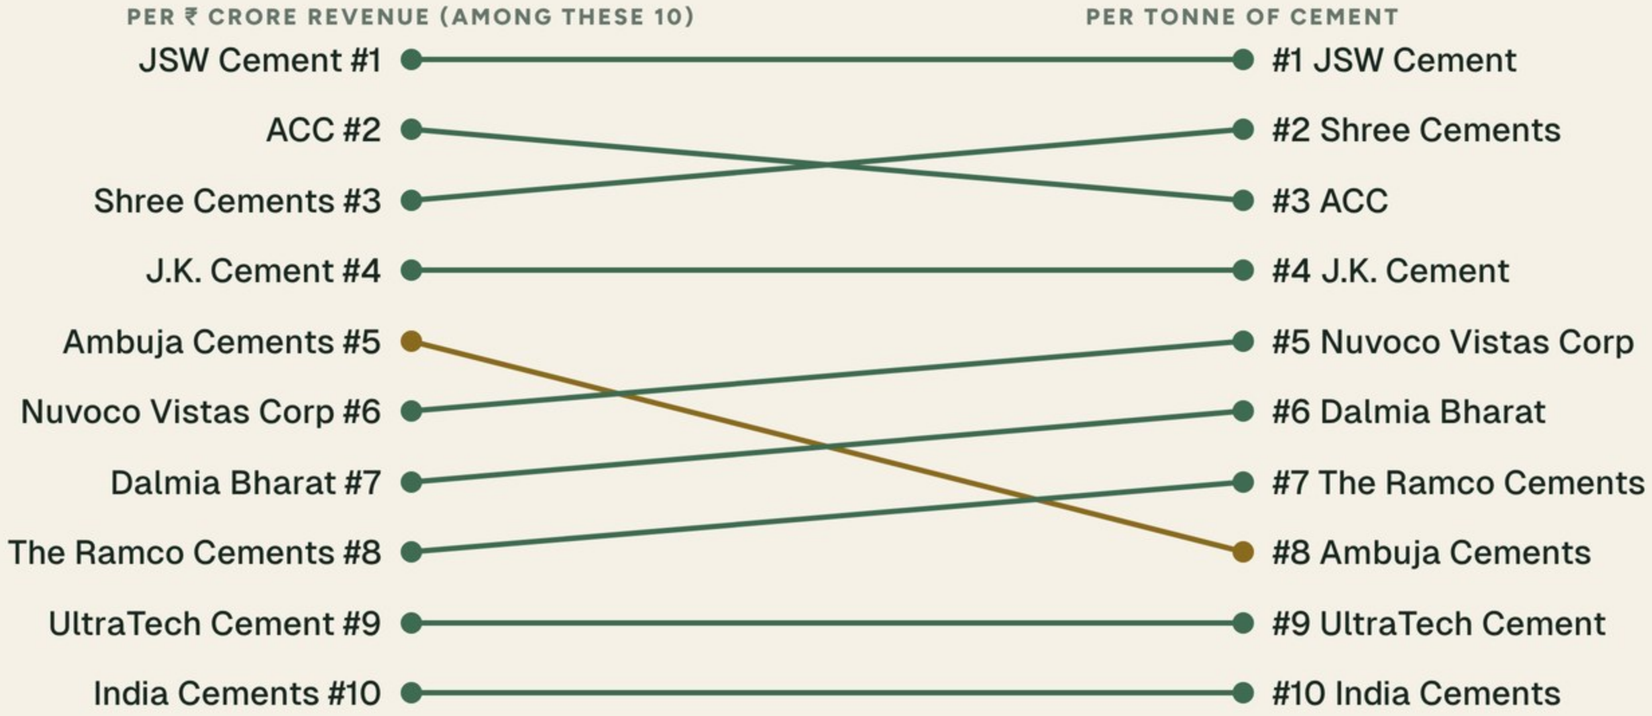

0.98+

rank correlation with and without credit, every group

No credit for plans, promises, sourcing programmes, or compensatory afforestation required by law.

For cement, per tonne and per rupee broadly agree

Revenue favours expensive products, so cement was also scored per tonne produced (SASB/ISSB metric, reported by all 10 pure cement makers). Rank correlation 0.92.

Power per MWh was tested too: only 9 generators have complete data, below the 10 needed to rank.

Land is the missing disclosure

BRSR has no field for land area: we checked all 465 filings. We searched annual reports, mining leases and clearance papers for 106 land-heavy companies.

19

companies with a credible company-wide land total

Too few to rank any sector, so this is a pilot. Net degraded hectares = land held × share of nature typically lost on that land – land restored on site.

LARGEST FOOTPRINTS IN THE PILOT · HECTARES

COMPANY	LAND HELD	NET DEGRADED-HA EQUIV.
Vedanta	64,979	48,734
Hindalco Industries	14,641	10,864
Bharat Coking Coal	16,390	8,196
Power GRID Corp of India	7,630	4,883
Bharat Heavy Electricals	6,754	4,050
Hindustan Aeronautics	4,860	2,916
JSW Steel	8,380	2,448
Bharat Electronics	1,245	747
Vedanta Power	1,652	544
Shree Cements	1,341	497

The fix is one disclosure: total land owned and leased, in hectares, including mining leases.

Putting a rupee figure on reported pressure, as an illustration

Reported quantities × prices from published research, each triangulated from 3–5 sources (2025 rupees). Carbon is the global social cost; the others are India-adjusted. Not used in any rank.

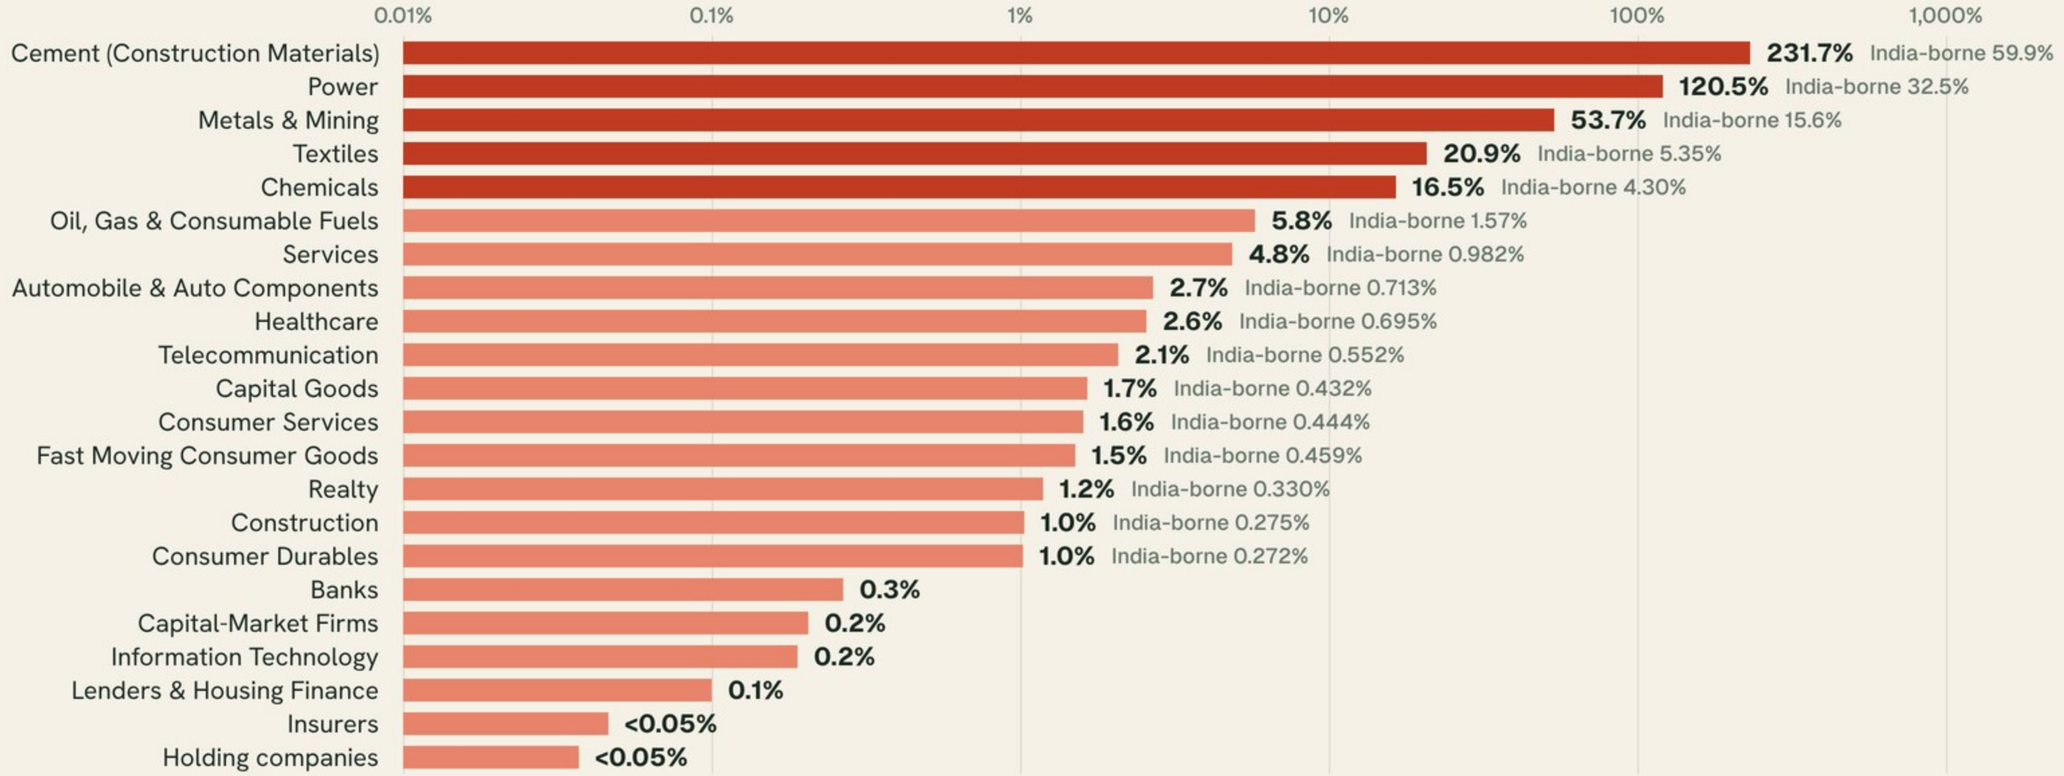

PRESSURE	CENTRAL	RANGE	BASIS
Greenhouse gas · per tCO2e	**₹22,600**	₹13,900 – ₹38,400	US EPA 2023 social cost of carbon; Rennert et al. 2022, Nature
SOx · per tonne	**₹209,000**	₹85,000 – ₹1,369,000	Median of 4 India health-damage studies
NOx · per tonne	**₹210,000**	₹111,000 – ₹993,000	Median of 3 estimates
Particulate matter · per tonne	**₹306,000**	₹155,000 – ₹934,000	CE Delft, adjusted to India
Water consumed · per kL	**₹40**	₹10 – ₹200	Kumar 2006, Water Policy; IFVI 2026
Degraded land · per ha per year	**₹64,867**	₹8,197 – ₹119,872	ESVD India; de Groot 2012; Brander 2024

Waste is not priced: no reliable India-specific value. Carbon is the global cost of climate damage; about a quarter is borne in India.

Not a bill, a liability or a valuation. Never add companies together: Scope 2 double-counts.

At the global carbon price, the unpriced cost of cement and thermal power exceeds their sales

Median illustrative nature cost as a share of revenue, by peer group (log scale; 5+ costed companies). Grey: counting only the share of carbon damage borne in India.

Illustrative only: a sector pattern, not a bill. At the low carbon price, cement is still about 140%.

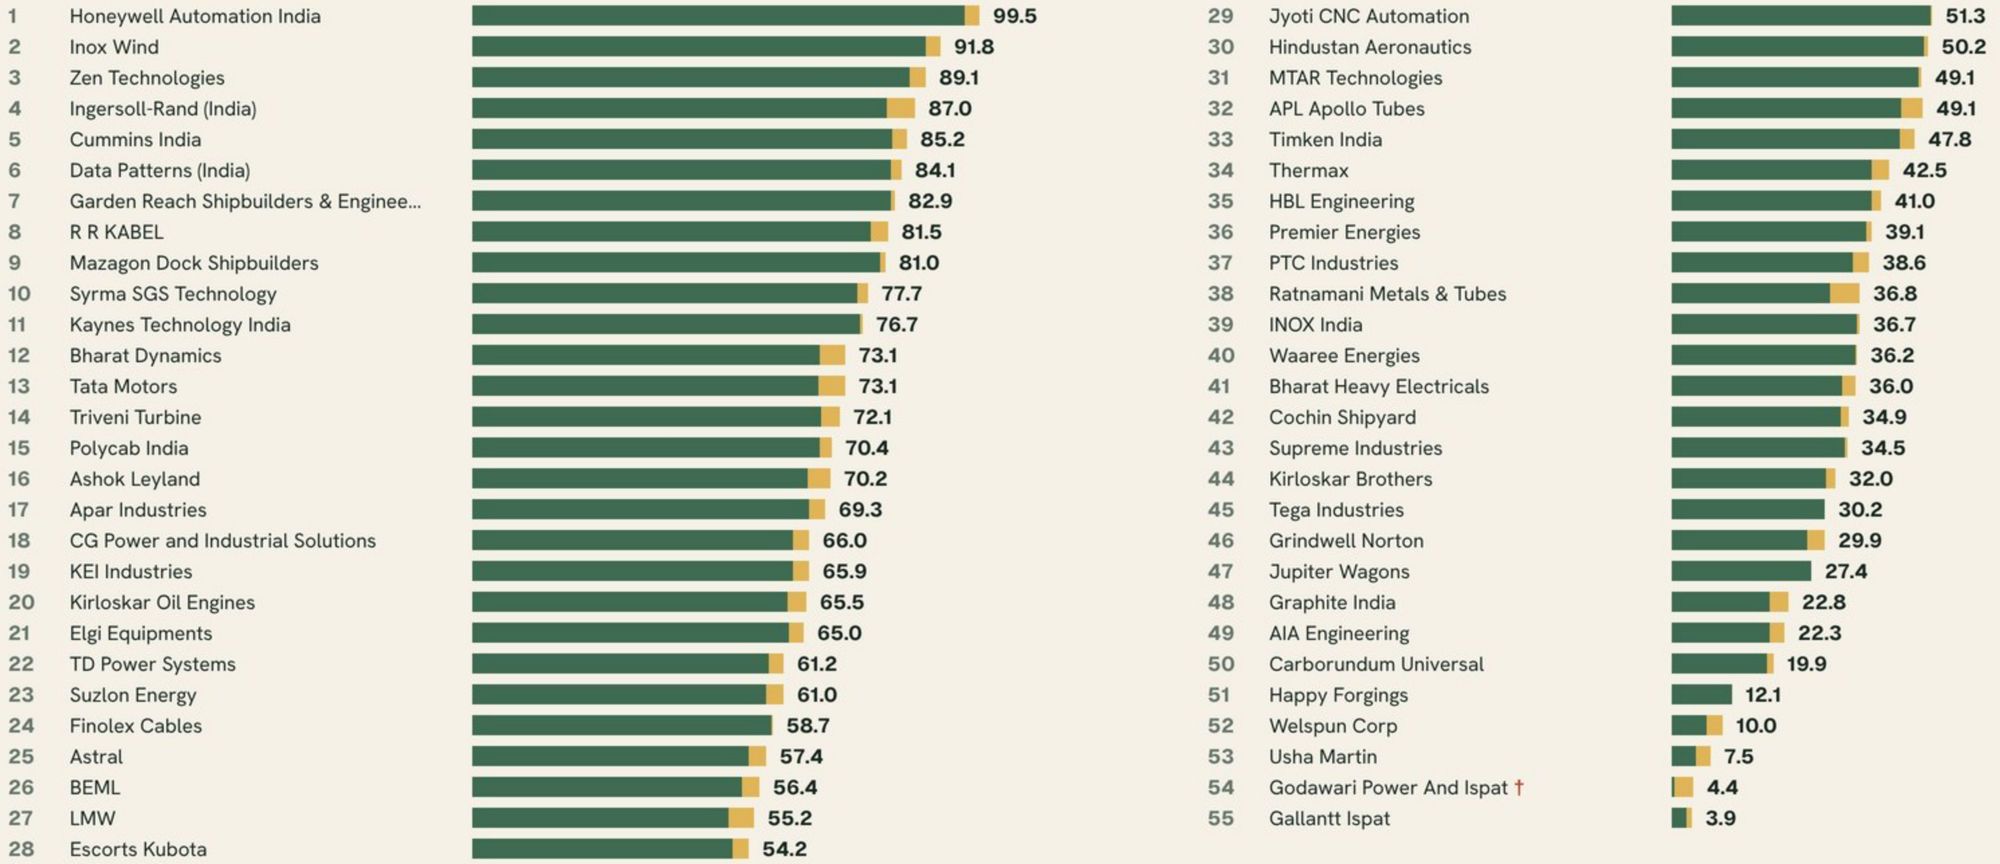

Median intensities differ by orders of magnitude across sectors

Median per ₹ crore of revenue. Darker = higher. This is why CLBI never ranks across sectors.

Three groups are one or two disclosures short of a ranking

Construction

8/11

with complete data (10 needed)

3 held back as data queries; the rest missing a metric or a zero to confirm. Scores shown in the dataset, no rank.

Realty

8/11

with complete data (10 needed)

2 held back as data queries; the rest missing a metric or a zero to confirm. Scores shown in the dataset, no rank.

Insurers

9/11

with complete data (10 needed)

0 held back as data queries; the rest missing a metric or a zero to confirm. Scores shown in the dataset, no rank.

Listed only, fewer than 10 companies in the universe: Telecommunication (8) · Textiles (5) · Diversified (3) · Media Entertainment & Publication (2).

Most gaps close when companies confirm a zero or fix a unit, not when we model anything.

Four disclosures would turn this into a full land and nature ranking

ASK 01

Land

Report total land owned and leased, in hectares, including mining leases. It unlocks a biodiversity rank for every company.

ASK 02

Units

Use the BRSR units exactly (tonnes, kilolitres). 31 values are held back, most of them likely unit or boundary slips.

ASK 03

Air

Report NOx, SOx and dust as tonnes per year, not only stack concentrations: half of companies cannot be compared today.

ASK 04

Scope 2

State the basis (location or market) and the gross figure before renewable certificates.

Companies can correct any value with a page reference to their own published report.

Every company, every number, every source: one click away

WEBSITE

vinaybale-collab.github.io/clbi

Search any of the 500 companies. Each page shows its rank, the score build-up, its intensity against peers, and every data point with link, page and quote.

DATASET · EXCEL

CLBI_v1.1_Dataset.xlsx

32 sheets: rankings by sector, full data lineage, credits, comparators, air, land pilot, illustrative nature cost, and a Calculations sheet that recomputes every rank with live formulas.

Methodology note: CLBI v1.1, how it works (7 pages, plain language).

FOR DISCUSSION AT ILDC 2026

What would it take for India’s largest companies to report their land?

Urvara.Life × Landstack · CLBI v1.1 · draft for review
