CORPORATE NATURE PRESSURE INDEX (CNPI) · V1.2

Who presses hardest on nature, per rupee earned?

India's 500 largest listed companies, compared with peers in the same business, on what they report: climate, energy, water and pollution.

500	409	24	4	4,268
COMPANIES	RANKED	PEER GROUPS	PRESSURES	SOURCED VALUES

Draft for review · ILDC 2026, Bhubaneswar · not for publication
Data: BRSR and financial filings, FY2025-26 · formerly “CLBI”

For every rupee a company earns, how much pressure does it put on nature?

CNPI compares each company with peers in its own line of business, on four pressures the company reports.

A RANK MEANS

Among its peers, the company reported the **lowest net pressure per rupee of revenue** in FY2025-26 on climate, energy, water and pollution together, after counting the renewables, recycling and returned water it reports.

A RANK DOES NOT MEAN

- a small footprint in absolute terms
- a biodiversity or land score: land appears as evidence
- an ESG rating, or a ranking across sectors
- that its supply chain or financed activity is covered
- that any company has done something wrong

Each comparison stays inside one peer group: cement makers meet cement makers, banks meet banks.

CNPI ranks 409 companies on reported pressure and prices that pressure at a median 4.4% of EBITDA

PRODUCT 1 · THE INDEX

Physical pressure, ranked within peers

Climate, energy, water and pollution, net of the company's own renewables, recycling and returned water, per ₹ crore of revenue. Air has its own rank. The rank uses company-reported quantities.

409
companies ranked

24
peer groups

PRODUCT 2 · ILLUSTRATIVE

Nature cost, as a share of EBITDA

Each reported pressure × a published damage price (carbon at the India-borne share, water by scarcity, energy depletion, landfill, air health). Shown pressure by pressure, with % of revenue alongside. It stays out of the rank, and we do not add companies into a bill.

4.4%
of EBITDA, median company (middle half 1.34–16.0%)

370
non-financial companies with a costed total and positive EBITDA

The rank compares pressure per rupee among peers. The price estimates what that pressure costs. Neither feeds the other.

409 of 500 companies have clean enough data to rank against their peers

UNIVERSE
NSE's 500 largest by average market cap, Jan–Jun 2026 (AMFI)

BRSR FILED
FY2025-26 BRSR data: 465 parsed data files, plus 10 completed from filed PDFs and reports

REPORTS EACH PRESSURE
Every required pressure reported, from any source (zeros count as reported)

PASSES CHECKS = COMPLETE
No held-back value, no zero to confirm, revenue year matched: complete, clean data

IN A RANKABLE GROUP
Peer group (and NSE sector) has at least 8 companies

RANKED
At least 8 companies with complete clean data in the group: 24 peer groups

WHERE THE 91 DROP OUT

36 missing data
25 without usable FY2025-26 BRSR data; 11 missing a required pressure

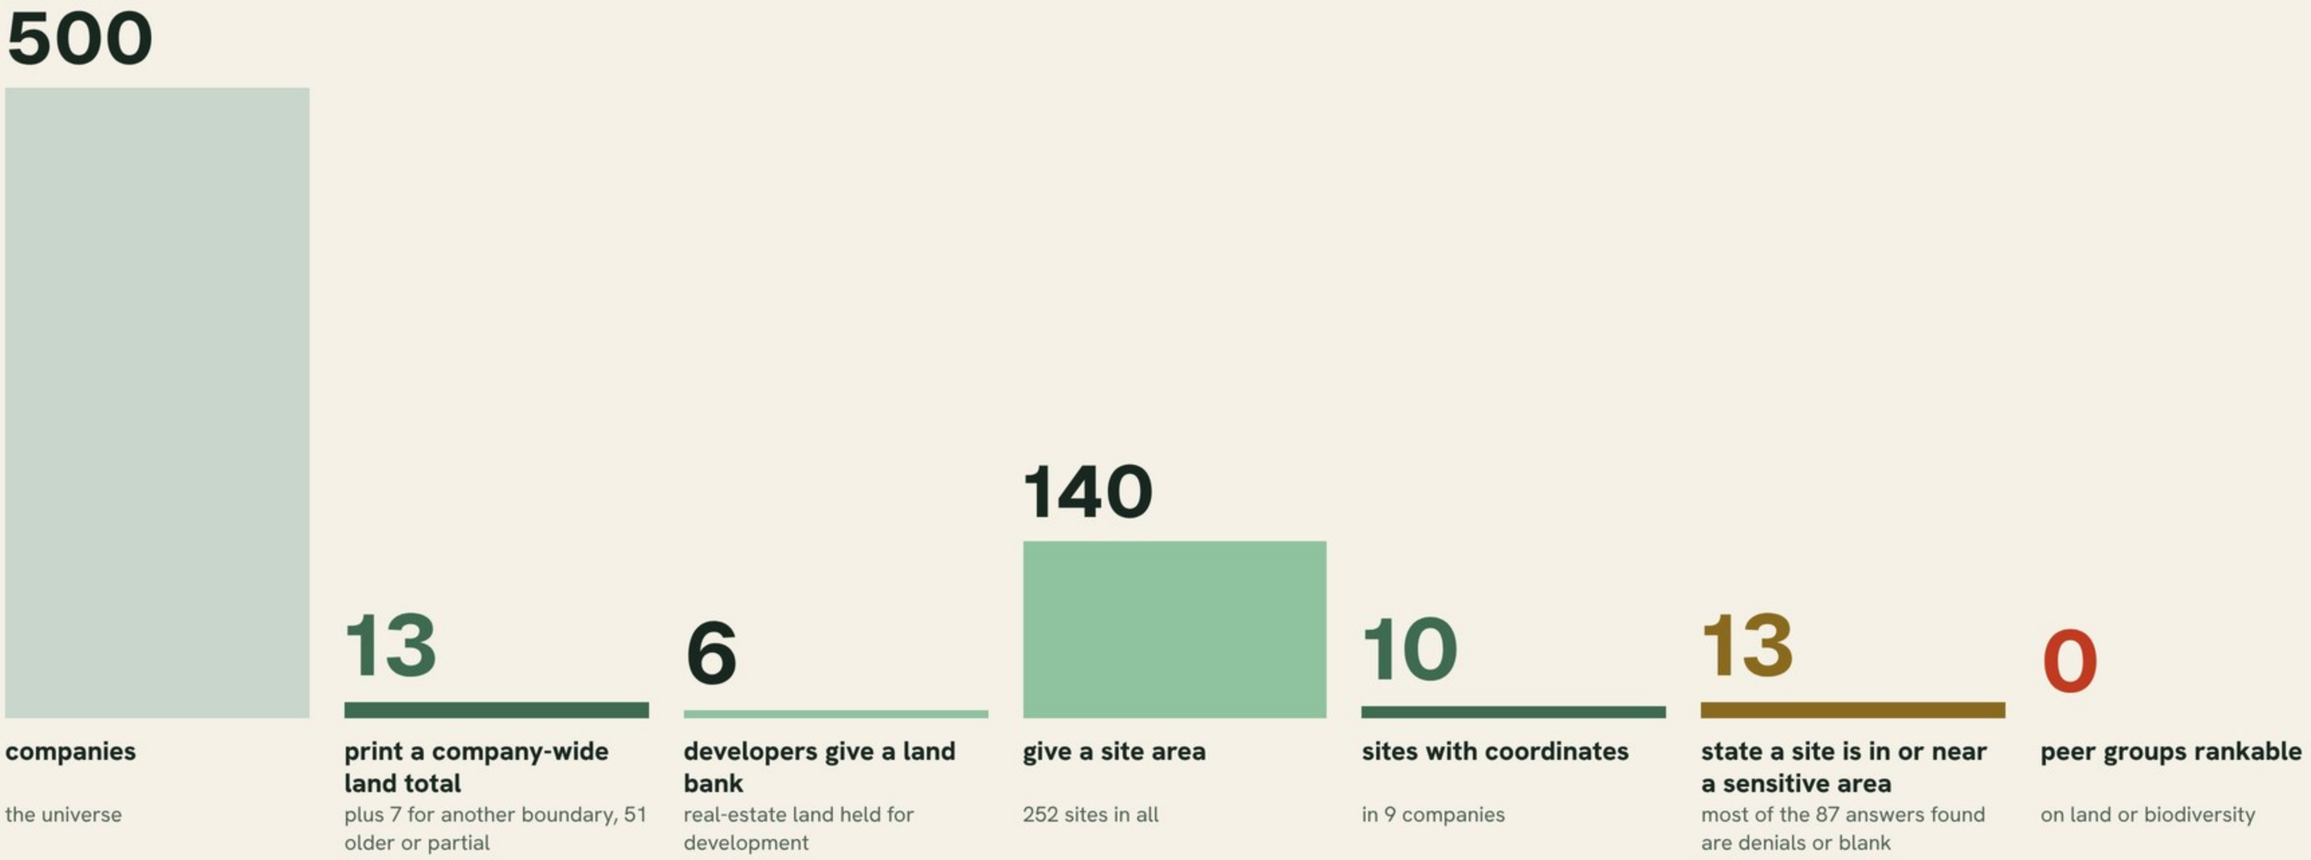
35 fail a quality check
21 with a held-back value, 13 with a zero to confirm, 1 revenue year not matched

20 group too small
13 in groups under 8; 7 in Telecom & Media, where 7 of 8 are complete

Quality checks remove 35 companies and missing data removes 36: a printed number still needs checking.

13 of 500 companies print a company-wide land total, and 10 sites carry coordinates

Hermes, an independent DeepSeek search, read the filings and reports of all 500 companies for land, sites and sensitive areas. BRSR has no hectare field.



We show land as evidence for each company and keep it out of every score.

BARS TO SCALE

95% of companies report energy, water and waste; 49% report air as a mass, 2.6% a land total

Companies per parameter, from reported to usable to scored. “Usable” = reported, non-zero, not held back and on the matched revenue year.

PRESSURE	REPORTED OF 500	UNIT MACHINE-READABLE · OF 465	USES A REPORT GAP-FILL	ZERO TO CONFIRM	HELD BACK	USABLE	IN THE RANK	COMPARABLE FINDING · IIM BANGALORE, FY2024-25, 982 COMPANIES
Climate	473	212	94	13	6	**450**	409	Scope 3: 57.1% do not disclose it (IIMB). Here 36% of 465 filings carry no Scope 3 figure; it is not scored.
Energy	473	461	12	2	7	**462**	409	47.2% cannot report energy per unit of output (IIMB).
Water	473	463	2	6	6	**460**	409	49.1% cannot report water per unit of output (IIMB).
Pollution	472	463	5	8	17	**443**	366	51.0% cannot report waste per unit of output (IIMB).
Air	245	180	61	10	13	**222**	178	29.2–29.3% report no NOx, SOx or PM at all (IIMB). Here 51% have no mass figure in tonnes.
Land	77	no field	–	-	-	**13**	0	76.0% have no credible biodiversity disclosure (IIMB). Here 97% print no company-wide land total.

IIMB = Tripathi, Gupta, Krishna & Gandhi (2026), *BRSR disclosures of India’s top 1,000 listed companies, FY2024-25*, IIM Bangalore monograph (research.iimb.ac.in, article 1149). IIMB covers a different year, sample and definitions, so treat the comparison as indicative.

246 of 465 data files tag Scope 1 and 2 as “MtCO2e”, which can mean tonnes or million tonnes.

221 of 409 ranked companies rest on at least one repaired value

4,268 values on the nine core quantities, each with its source link, field or page, boundary and confidence tier.

WHERE THE CORE VALUES COME FROM

- **84.2%** Tier 1 · BRSR data file, unit stated
- **8.2%** Tier 2 · data file reconciled with BRSR PDF
- **5.6%** Tier 3 · public report, exact quote recorded
- **1.0%** Tier 4 · missing unit filled by a fixed rule
- **1.0%** Tier 5 · corrected from the filed BRSR PDF

221

of 409 ranked companies rest on at least one core value that is not tier 1

85

rest on at least one value gap-filled from a public report

REPAIR (ALL METRICS)	VALUES	COS
Data file reconciled with the filed PDF (tier 2)	**410**	163
Fixed unit rule: “MtCO2e” read as tonnes; t/yr as annual mass (tier 4)	**51**	27
Corrected from the printed BRSR table (tier 5)	**44**	17
Gap-filled from a public report, quote recorded (tier 3)	**427**	161
Air values excluded: unit could not be verified as a mass	**322**	111

Ten companies’ energy data files differ from their own printed tables by a factor of 10^{3} to 10^{12} (kWh, MJ or TJ filed as GJ).

Each correction uses the company’s own printed figure; we add no estimates.

26 companies report consuming more water than they withdraw, and 25 recovering more waste than they generate

We test each filing against itself: do the tables add up, and do the numbers agree?

26

consume more water than they withdraw

Two report zero withdrawal beside more than a million kL consumed. Above 10×, the value is held back; otherwise capped at withdrawal.

25

recover more waste than they generate

Stock drawn down is booked as this year's recovery. Above 1.5×, held back. 114 of 465 claim at least 99% recovery.

91%

of all reported waste is one company's overburden

Coal India reports 5.35 billion t generated and almost all of it recovered; GMDC, also a miner, reports 69 t.

441 / 465

data files do not state the Scope 2 basis

Without the basis, a low Scope 2 may reflect renewable contracts or an error.

42

imply a grid factor outside 0.5–1.0 t/MWh

Scope 2 divided by purchased non-renewable electricity: from 0.0007 to 141 t/MWh, where the grid is about 0.71.

10

emitters above 1 Mt Scope 1 report no air tonnage

Including NLC India (31.6 Mt) and Coal India (28.2 Mt). 111 companies report air as concentrations, with no mass.

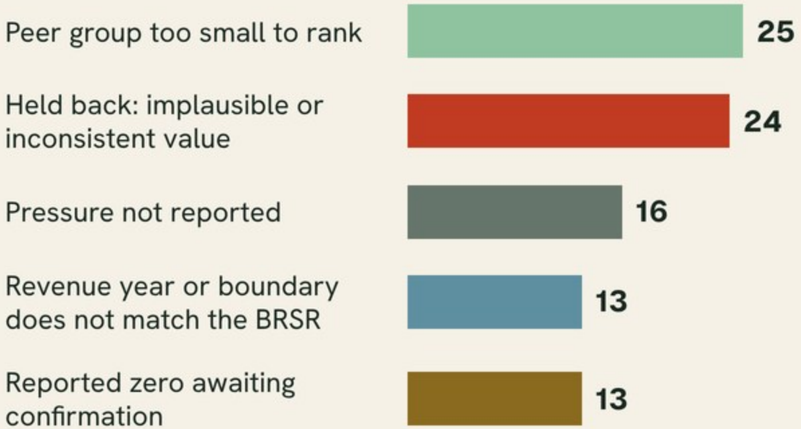
Counts across all 500 from the current build; grid-factor and air tests from the analyst review of the same files (insights/pressures).

We list each case so that the company can confirm or correct its figure.

We list all 91 unranked companies, with the reason and the values behind it

Five reasons cover them all. Each peer group has its own exclusion list.

ALL 91 UNRANKED COMPANIES, BY REASON



A held-back value stays in the dataset with a flag. The company enters the rank once it confirms or corrects the value with a page reference.

EXAMPLE · MACHINERY, ENGINEERING & DEFENCE: 25 RANKED, 6 LISTED

BEML	Held back: implausible or inconsistent value	water: water consumed more than 10x water withdrawn
Ingersoll-Rand (India)	Held back: implausible or inconsistent value	climate (Scope 1+2): Scope 2 implies more grid electricity than 1.5x the company's total reported energy
Thermax	Held back: implausible or inconsistent value	energy: value far below peer median, possibly under-reported or head-office only
SKF India (industrial)	Pressure not reported	not reported: climate, energy
Azad Engineering	Reported zero awaiting confirmation	reported zero (to confirm): Scope 1 or Scope 2 component of climate
KSB	Revenue year or boundary does not match the BRSR	revenue period/boundary not matched: no_FY2026_annual_xbrl

Each peer group's exclusion list sits on its physical-flows slide and in the dataset.

Six rules decide what enters a rank

01
Company data only
Ranks use what companies report. We add no estimates or models, and a blank stays blank.

02
Every number traceable
Each value carries its link, page or filing field, and the exact quote when taken from a report.

03
Like with like
A company meets peers in its own business, and a group needs 8 with complete data.

04
Simple, open maths
Anyone can reproduce every score; the dataset recomputes all 500 with spreadsheet formulas.

05
Doubtful values held back
We hold back a value that looks wrong until the company confirms it, even when it is printed.

06
Good practice counts in full
Renewables, recycling and returned water reduce the pressure they act on, with no cap. Tree planting cannot cancel emissions.

Each ranked number traces to the company's own disclosure.

54 companies moved to the peer group of their main product

NSE's 20 sectors in this universe mix different businesses: its "Capital Goods" held steel-pellet makers beside wind-turbine and automation firms, so greenhouse-gas intensity varied more than 1,000-fold inside one sector.

54

companies moved out of their NSE sector to the group of their main business

We place each company by its **largest share of turnover**, from its own BRSR product lines (NIC codes), and check the annual report where unclear. Splitting large NSE sectors gives 29 peer groups, 24 with enough data to rank.

EXAMPLES · FROM NSE SECTOR TO PEER GROUP

Godawari Power & Ispat	Capital Goods	→	**Steel & iron products**	pellets, sponge iron, billets
Inox Wind	Capital Goods	→	**Electrical equipment**	wind turbine generators
Honeywell Automation	Capital Goods	→	**Electrical equipment & electronics**	building and industrial automation
Coal India	Oil, Gas & Fuels	→	**Non-ferrous metals & mining**	coal mining

The dataset's 'Peer groups' sheet records each move and its evidence.

The rank nets four pressures: renewables, recycling and returned water offset their own pressure in full

All from the BRSR (Principle 6) every listed company files; revenue from the same year's financial filing, on the same boundary. No points, no cap, no cross-credit.

IN THE RANK

Climate

Scope 1 + Scope 2 greenhouse gases · tCO2e

Renewable electricity lowers Scope 2

473

of 500 companies report it

IN THE RANK

Energy

Energy from non-renewable sources · GJ

Renewable energy is not counted · 59 ranked companies get half or more from renewables

473

of 500 companies report it

IN THE RANK

Water

Water withdrawn minus water discharged · kL

Water returned (discharged) is not counted; consumption capped at withdrawal

473

of 500 companies report it

IN THE RANK

Pollution

Waste generated minus waste recovered · t

Recycled, re-used or recovered waste is not counted · 174 ranked recover 90% or more

472

of 500 companies report it

ALONGSIDE

Air

NOx + SOx + particulate matter · t

Air has its own rank where 8 or more peers report a mass in tonnes

245

of 500 companies report it

Tree planting cannot cancel a tonne of CO2, and recycling cannot cancel water use.

CNPI scores Scope 1 and Scope 2; 126 of 465 filings give a usable Scope 3

The GHG Protocol splits a company’s emissions into three scopes. CNPI scores the two that each BRSR must report and the company controls.

SCORED

Scope 1

Direct emissions from the company’s own sites: fuel burnt in boilers, kilns, furnaces and vehicles, gases released by processes such as clinker-making, and refrigerant leaks.

SCORED

Scope 2

Emissions from generating the electricity the company buys. We take it as reported: 441 of 465 data files do not say whether it uses the grid average or contracts bought. We accept a zero where the filing shows at least 90% renewable supply.

NOT SCORED

Scope 3

Everything upstream and downstream: suppliers, transport, use of products, and for banks, what they finance. 126 of 465 data files give a positive figure in a clear unit, on different boundaries.

Scope 1 + Scope 2, in tonnes of CO2-equivalent, for FY2025-26.

ACC scores 86.1 and ranks #1 of 10 cement makers; you can check it by hand

Intensity = net pressure ÷ revenue. Line up the peers from lowest to highest, score 100 to 0, average the pressures, rank. ACC revenue ₹25,766 crore.

score = 100 × (n – position) ÷ (n – 1) position 1 = lowest intensity; ties share the average position; final score = mean of the scored pressures

CLIMATE	ENERGY	WATER	POLLUTION	FINAL SCORE
594	**2,564**	**161**	**≈ 0**	**86.1**
tCO2e per ₹ cr · 2nd lowest of 10	GJ non-renewable per ₹ cr · 1st lowest of 10	kL consumed per ₹ cr · 3rd lowest of 10	398,507 t generated, 398,506 t recovered · 3rd of 10	average of the four rank **#1 of 10** cement makers #2 per tonne of cement
SCORE **88.9**	SCORE **100.0**	SCORE **77.8**	SCORE **77.8**	

The score uses order alone, so one extreme value cannot distort another company's score.

CALCULATIONS SHEET: LIVE FORMULAS, ALL 500

We hold back 29 printed values until the company confirms them

The 29 values on the four pressures come from 24 companies; we show 11 more unscored where pollution is not scored. All stay in the dataset with a flag.

16

Extreme values

Gross figure more than 300× above or below the peer median per ₹ crore. Typical cause: a unit slip or a head-office-only boundary.

8

Inconsistent tables

Water consumed more than 10× water withdrawn, or waste recovered more than 1.5× waste generated.

2

Impossible Scope 2

A Scope 2 figure implying an electricity bill larger than the company's whole revenue (₹6/kWh, 0.71 t/MWh).

NEW IN V1.2

3

Scope 2 above energy

Scope 2 implying more grid electricity than 1.5× the company's total reported energy: Coal India, Canara HSBC Life Insu..., Ingersoll-Rand (India).

NEW IN V1.2

7

Zero Scope 2 accepted

We accept a zero Scope 2 where the filing shows at least 90% renewable energy or electricity. 7 of these are ranked.

NEW IN V1.2

30

Assumed discharge

Consumption printed at a fixed 20% of withdrawal assumes 80% returned; we credit no offset and score water on withdrawal (24 ranked).

13

Zeros to confirm

Any other zero total, or a zero Scope 1 or Scope 2 alone. For an operating company, a zero tends to mean 'not measured'.

A company with a held-back value on a scored pressure enters the rank once it resolves the value.

In four groups companies count their biggest waste stream in different ways, so pollution stays out of their rank

Scoring waste there would reward whoever left the biggest stream out. The rank uses climate, energy and water; the slides show the waste figures unscored.

POWER

Fly ash

NTPC reports 57 thousand tonnes of waste in its BRSR table, far below a coal fleet’s ash; Reliance Power reports 106.7 million and Adani Power 16.8 million tonnes.

NON-FERROUS METALS & MINING

Overburden & tailings

Coal India counts 5.35 billion tonnes of overburden, almost all as recovered. Hindustan Zinc reports 20 million tonnes; GMDC, a lignite miner, 69 tonnes.

CONSTRUCTION & ENGINEERING

Construction debris

Larsen & Toubro reports about 596 thousand tonnes; IRCON (10 t), RVNL (33 t) and NBCC (24 t) report almost none.

REAL ESTATE

Demolition & site debris

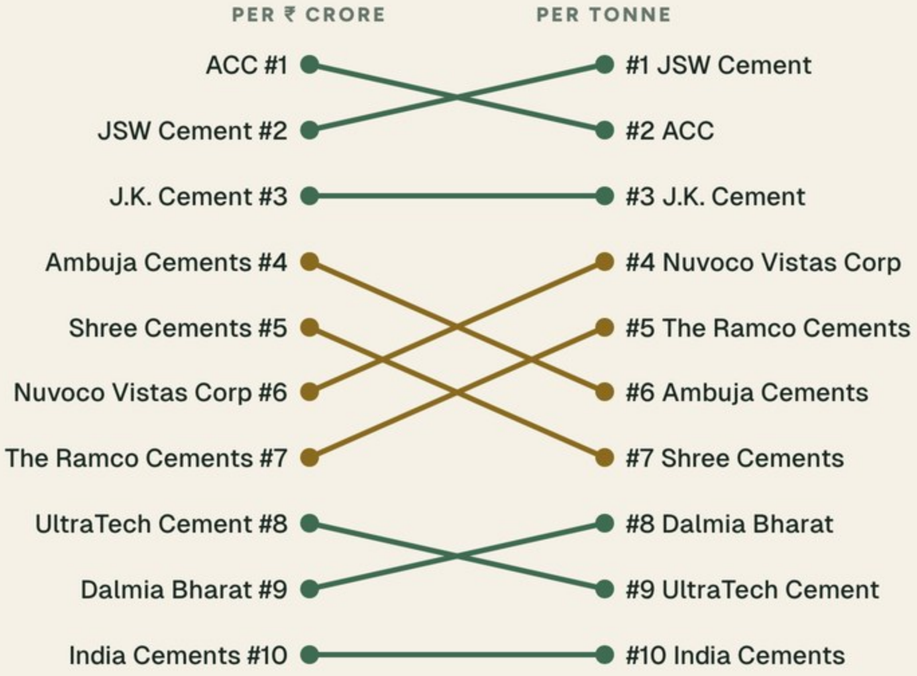
Godrej Properties reports 2.9 million tonnes and Brigade 2.0 million, almost all recovered; Anant Raj reports 0.74 t and Phoenix Mills 598 t.

In the other 20 groups a company needs all four pressures, so leaving one out cannot help it.

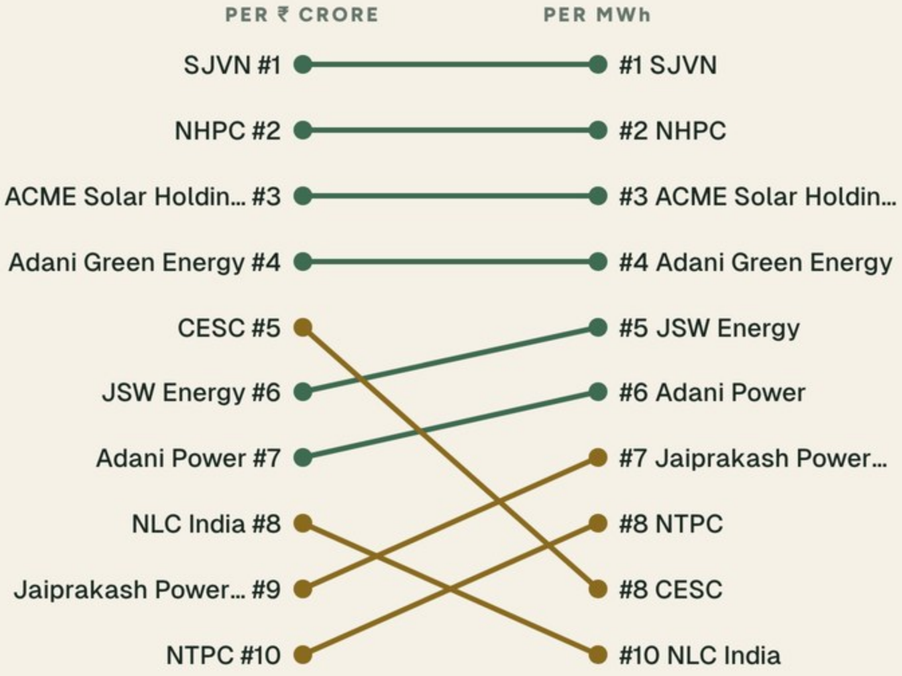
Per tonne, cement ranks track the revenue ranks (ρ = 0.88); per MWh, coal generators move up

Revenue favours expensive products, so we also rank cement per tonne and power per megawatt-hour, the two output measures peers report on a matching basis (SASB/ISSB).

CEMENT · 10 COMPANIES · P = 0.88



POWER GENERATORS · 10 COMPANIES · P = 0.85



These ranks sit beside the revenue rank. Transmission companies have no generation figure.

GOLD LINE = MOVES 2+ PLACES

13 of 500 companies print a company-wide land total, too few to score land

BRSR has no field for land area. It asks how many plants a company has, and whether any sit in or near an ecologically sensitive area, in free text.

13

companies print a company-wide land total, out of 500

6 developers give a land bank, 7 a figure for a different boundary, 51 an older or partial one. Owned, leased and mining-lease areas are different quantities.

PROPOSED METHOD · TO DECIDE ONCE THE DATA EXIST

site area × (1 – MSA) × proximity weight

MSA, mean species abundance (GLOBIO): the share of original species abundance that survives under a land use.
Proximity weight rises for sites in or near protected areas (WDPA) and Key Biodiversity Areas.
It needs site polygons or coordinates: today 10 of 326 sites found have them.

LARGEST COMPANY-WIDE LAND TOTALS · HA

Vedanta	64,979
Bharat Coking Coal	16,390
JSW Steel	8,380
Bharat Heavy Electricals	6,754
Hindustan Aeronautics	4,860
JSW Infrastructure	1,303
Bharat Electronics	1,245
Shyam Metalics & Energy	739

Oil India's figure is the area of its petroleum mining leases, not land occupied.

The fix is one disclosure: hectares owned, leased and under mining lease, with site coordinates.

At central prices, the median company's nature cost is 4.4% of its EBITDA

Reported quantity × central price, in 2025 rupees. We read the cost against EBITDA, with % of revenue alongside. The cost stays out of every rank, and we do not add companies into a bill.

PRESSURE · UNIT	CENTRAL	LOW – HIGH	BASIS
Carbon, India-borne share · per tCO2e (Scope 1+2)	**₹5,400**	₹2,800 – ₹11,500	23.9% India share (median of Ricke 2018, Tol 2019, Thaller 2026) × US EPA 2023 global SCC
Carbon, global SCC · for reference, not added	**₹22,600**	₹13,900 – ₹38,400	US EPA 2023 social cost of carbon at 2%
Energy depletion · per GJ non-renewable	**₹80**	₹0 – ₹550	CE Delft 2024 external price of fossil-resource scarcity
Water scarcity · per kL consumed	**₹358**	₹39.6 – ₹440	IFVI/VBA 2026 India value factor incl. future-access (scarcity) cost; low = damage-only
Waste not recovered · per tonne	**₹600**	₹300 – ₹9,200	Median of 5 landfill-damage values (IFVI GVFD 2024 India; Rabl 2008; others)
SOx · per tonne	**₹209,000**	₹85,000 – ₹1,369,000	Median of 4 India health-damage estimates (Indian VSL)
NOx · per tonne	**₹210,000**	₹111,000 – ₹993,000	Median of 3 estimates
Particulate matter · per tonne	**₹306,000**	₹155,000 – ₹934,000	CE Delft PM10, adjusted to India

HEADLINE · CENTRAL PRICES

4.4% of EBITDA, median company (n=370, incl. 8 thin margins; middle half 1.34–16.0%); 0.58% of revenue (n=460)

LENS A · WATER DAMAGE-ONLY, ₹39.6/KL

3.3% median, of EBITDA

LENS C · AIR AT A GLOBAL VSL

4.8% median · SOx ₹10.2 lakh, NOx ₹3.4 lakh, PM ₹15.9 lakh /t

Checked: converting every price by one convention (purchasing power or exchange rate) gives the same mix by pressure, so the result does not depend on the conversion choice. Seawater consumed is not priced as water (7 companies).

Of the summed cost of the 465 costed companies: carbon 68.8% · energy depletion 9.5% · water scarcity 11.1% · waste not recovered 1.2% · air pollution 9.3%; carbon is a median 65% of a company's own cost. % of EBITDA for every non-financial company with positive EBITDA; margins under 5% are flagged as unstable.

Read it as an illustration of scale. Scope 2 double-counts power generators' Scope 1, so a sum across companies overstates the total.

Carbon is 69% of the summed nature cost; Cement's median cost is 316% of EBITDA

Highest medians as a share of EBITDA: Cement 316%, Steel & Iron Products 165%, Power 160%. Bars show each pressure's share of the group's costed total.

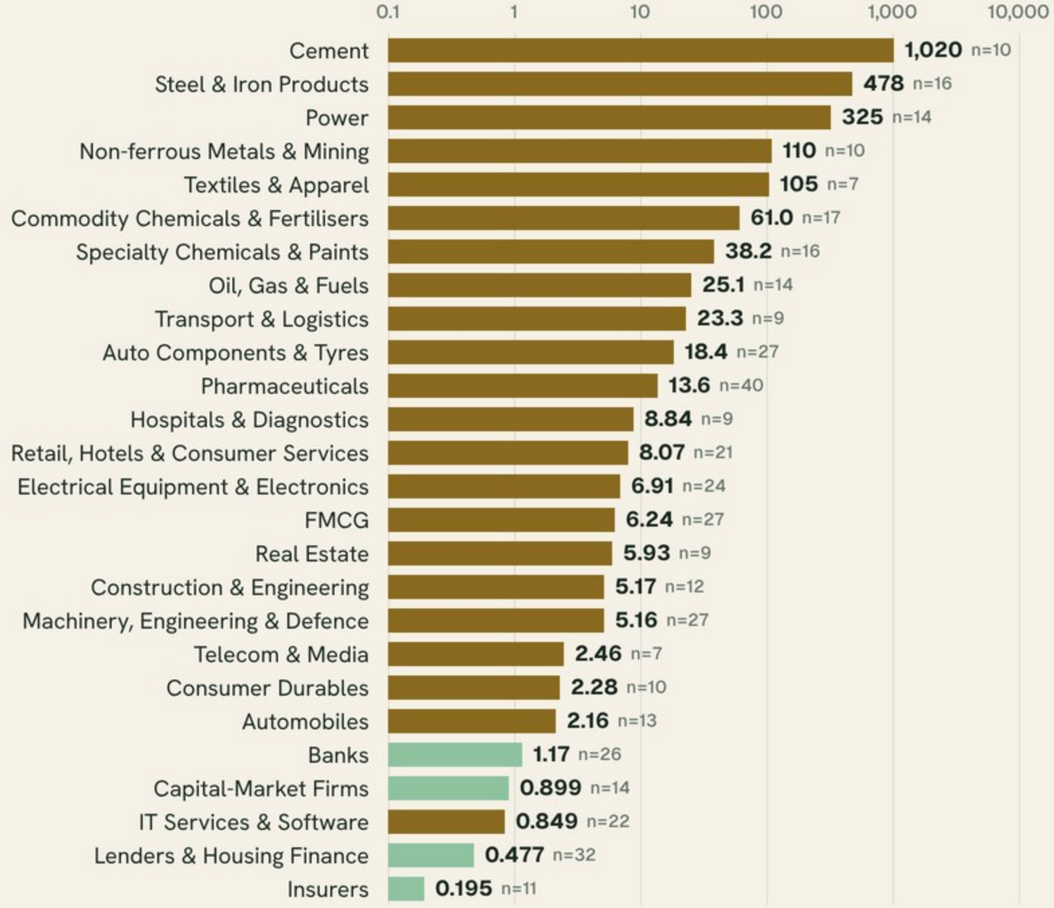
	MEDIAN % EBITDA	MIDDLE HALF % EBITDA	MEDIAN % REVENUE	
Cement	316%	284–368%	62.6%	n=10
Steel & Iron Products	165%	83.8–321%	34.1%	n=16
Power	160%	0.885–324%	38.0%	n=15
Commodity Chemicals & Fertilisers	50.8%	8.85–105%	6.44%	n=17
Non-ferrous Metals & Mining	30.4%	19.6–105%	12.9%	n=10
Oil, Gas & Fuels	15.5%	7.21–26.2%	2.08%	n=13
Transport & Logistics	14.6%	2.17–29.8%	1.61%	n=9
Specialty Chemicals & Paints	11.1%	2.07–33.4%	2.91%	n=16
Auto Components & Tyres	8.99%	4.34–12.3%	1.42%	n=27
Construction & Engineering	4.68%	0.670–8.78%	0.595%	n=12
FMCG	4.42%	1.30–13.1%	0.766%	n=27
Hospitals & Diagnostics	4.27%	3.43–4.79%	1.04%	n=9
Pharmaceuticals	3.95%	2.33–6.94%	1.15%	n=40
Machinery, Engineering & Defence	3.50%	1.56–6.16%	0.875%	n=28
Retail, Hotels & Consumer Services	2.67%	0.777–4.47%	0.636%	n=23
Electrical Equipment & Electronics	2.61%	1.35–4.08%	0.429%	n=25
Consumer Durables	2.29%	1.19–7.00%	0.197%	n=10
Real Estate	2.16%	0.827–9.72%	0.575%	n=10
Automobiles	1.24%	0.936–2.11%	0.212%	n=11
IT Services & Software	0.366%	0.223–0.526%	0.0748%	n=22

Non-financial groups with 5+ costed companies, sorted by median % of EBITDA (n = companies with positive EBITDA; thin margins included). Price set B: carbon India-borne, water scarcity-inclusive. Illustrative sector pattern.

Climate intensity spans 5,242-fold across groups, and 441 of 465 filings leave the Scope 2 method unstated

Scope 1 + Scope 2 per ₹ crore of revenue. Highest: Cement; lowest: Insurers. The largest single emitter, NTPC, reports 309 Mt of Scope 1. We do not sum companies.

MEDIAN PER PEER GROUP · TCO2E / ₹ CR · LOG SCALE · GROUPS WITH 5+ VALUES



WHAT THE FILINGS SHOW

- Scope 2 follows the grid average: for 286 of 433 companies, Scope 2 ÷ purchased electricity equals the CEA FY2024-25 grid factor (0.71 t/MWh), though 441 of 465 data files do not state the method.
- 42 companies imply a grid factor outside 0.5–1.0 t/MWh (Nestlé India 141, Torrent Power 26.5); we hold back three whose Scope 2 exceeds 1.5× their total energy.
- Scope 2 is 3% of Scope 1+2 in cement but 94% in banks: in services, the climate score is an electricity score.
- Captive power moves emissions from Scope 2 to Scope 1 while the electricity may still be reported as consumed.

THE NUMBER CAN SUPPORT

Ranking companies within a peer group on operational Scope 1+2 per rupee.

IT CANNOT SUPPORT

Adding companies into national totals (power's Scope 1 reappears as others' Scope 2); renewable claims without a market-based figure; value-chain or financed emissions.

Findings: CNPI analyst review of the same files (insights/pressures), checked against the current build.

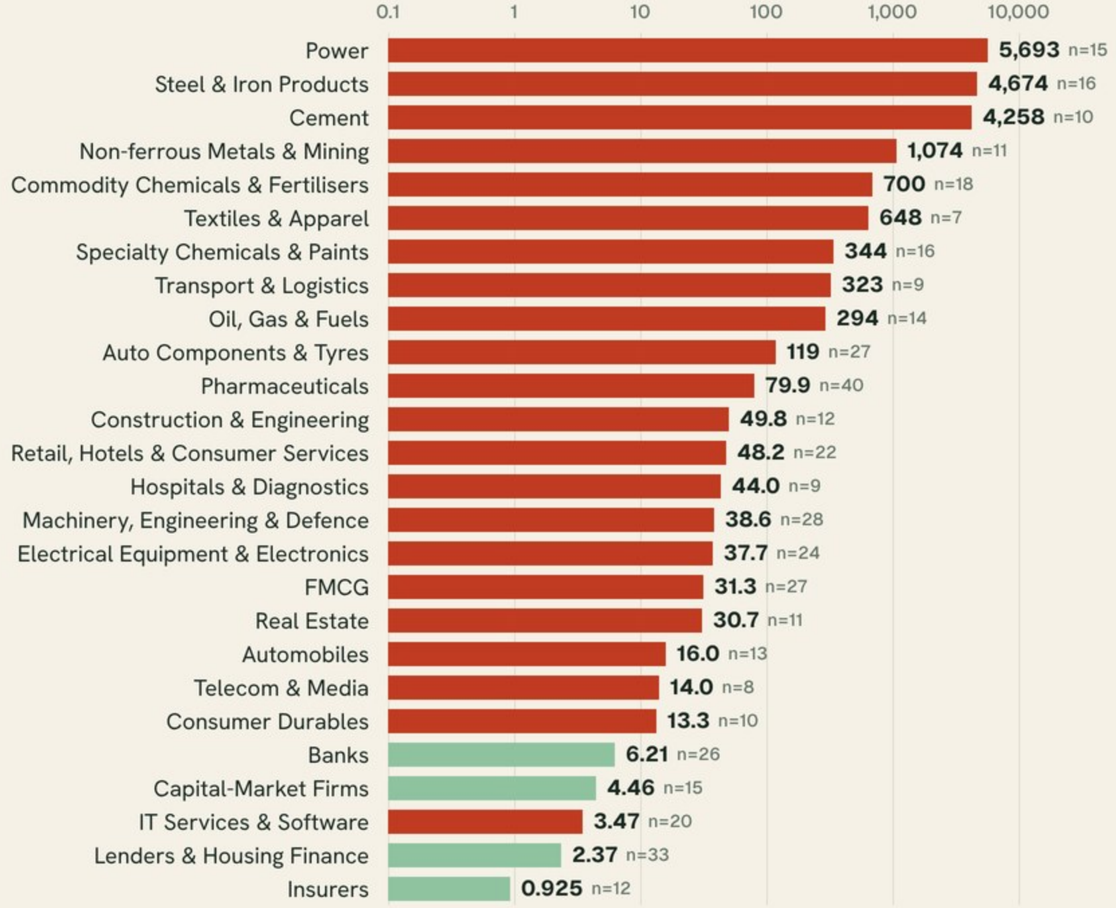
Climate decides most ranks in heavy industry; in services it is an electricity score.

LIGHT GREEN = FINANCIAL GROUPS

Energy intensity spans 6,153-fold, and ten data files differ from the printed table by a factor of 1,000 or more

Non-renewable energy, GJ per ₹ crore. Median renewable share: IT services 56%, steel 1.1%, power 0.1%. Renewables are highest where energy is smallest.

MEDIAN PER PEER GROUP · GJ / ₹ CR · LOG SCALE · GROUPS WITH 5+ VALUES



WHAT THE FILINGS SHOW

- Ten filed data files are wrong by 10^3 to 10^{12} against the company's own printed table (K.P.R. Mill 10^{12}; Sobha, Tata Chemicals, JSW Energy, BASF India 10^9).
- We corrected 38 values for 13 companies by hand from the printed BRSR; we hold back four companies that show no unit.
- CO2 per GJ of non-renewable energy (median 0.169 t) finds filings to query: from Azad Engineering's zero Scope 1 beside 1.1 million GJ of fuel, to Cupid's 41.5 t/GJ.
- Power generators' "energy consumed" is fuel turned into electricity that other companies then buy.

THE NUMBER CAN SUPPORT

Within-group dependence on fossil energy per rupee, net of the company's own renewables.

IT CANNOT SUPPORT

Separating grid purchases from captive generation; judging whether biomass or bagasse is sustainable; totals across companies.

Findings: CNPI analyst review of the same files (insights/pressures), checked against the current build.

Unit slips in the data files reach a factor of a trillion; check the printed table.

LIGHT GREEN = FINANCIAL GROUPS

Five companies take 81% of the water withdrawn, and no filing says where the water comes from

Net consumption, kL per ₹ crore. Group medians span 662-fold. Of 14.5 billion kL withdrawn, NTPC takes 41.6%. Scarcity depends on where the water comes from, and BRSR does not ask.

MEDIAN PER PEER GROUP · KL / ₹ CR · LOG SCALE · GROUPS WITH 5+ VALUES

WHAT THE FILINGS SHOW

- Consumption is not computed by one rule: 189 of 468 report consumption equal to withdrawal, many while also reporting discharge; 66 of 454 fail the water balance by more than 10%.
- 30 companies print consumption at a fixed 20% of withdrawal, an assumed 80% discharge. We credit no offset and score them on withdrawal.
- Seawater and once-through cooling are mixed with freshwater: 83% of Adani Power's 966 million kL is seawater; Tata Power withdraws 3.70 billion kL and consumes 266 million.
- Held back: consumption above 10× withdrawal (BEML, Privi Speciality, and Bajaj Finance and Bajaj Finserv against a zero withdrawal).

THE NUMBER CAN SUPPORT

Within-group comparison of water taken and not returned, per rupee.

IT CANNOT SUPPORT

Any statement about scarcity or basin stress: there are no facility coordinates, and freshwater is not separated from seawater.

Findings: CNPI analyst review of the same files (insights/pressures), checked against the current build.

Without location, a litre from a stressed basin counts the same as a litre from a wet one.

LIGHT GREEN = FINANCIAL GROUPS

One miner's overburden is 91% of all waste reported: each company decides what counts as waste

Waste generated minus recovered, t per ₹ crore. Coal India counts its overburden as waste; GMDC, also a miner, reports 69 t. In cement, recovery offsets 99.8% of the gross median.

MEDIAN PER PEER GROUP · T / ₹ CR · LOG SCALE · GROUPS WITH 5+ VALUES

WHAT THE FILINGS SHOW

- 114 of 465 companies recover at least 99% of their waste and 54 have net waste of zero or less; 25 recover more than they generate, drawing down stock.
- 72 of 449 filings do not balance (generated ≠ recovered + disposed by more than 10%): NMDC reports 21.4 million t generated and 350 t recovered.
- Fly ash, overburden and construction debris are in or out at discretion, so pollution is not scored in power, mining, construction and real estate.
- Hazardous waste is already a BRSR category and is filled, so a hazard-weighted pressure is feasible.

THE NUMBER CAN SUPPORT

Within-group share of waste not recovered, outside the groups where mineral or construction waste dominates.

IT CANNOT SUPPORT

Hazard or toxicity; mineral wastes; recovery from stock; anything about soil or water contamination.

Findings: CNPI analyst review of the same files (insights/pressures), checked against the current build.

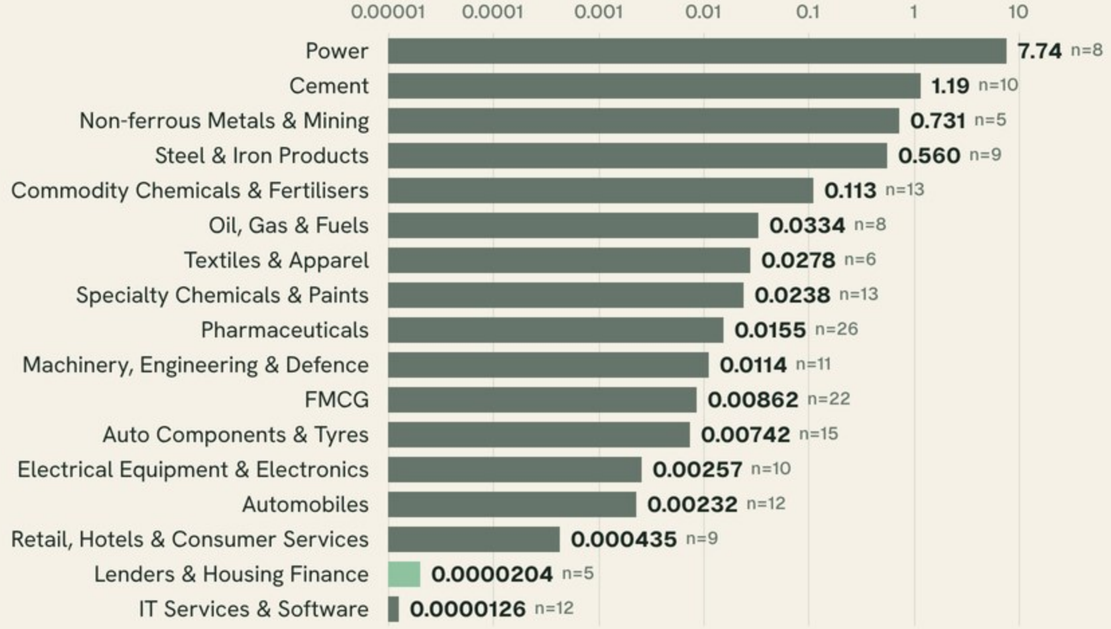
Mineral wastes and stock recovery need their own lines before pollution compares like with like.

LIGHT GREEN = FINANCIAL GROUPS

245 of 500 companies report air pollution as a mass; 111 report concentrations that cannot be added up

NOx + SOx + PM, t per ₹ crore. 245 of 500 report all three as annual mass; 178 are air-ranked in 14 groups. IIM Bangalore finds 29.3% of the top 1,000 report no air data at all.

MEDIAN PER PEER GROUP · T / ₹ CR · LOG SCALE · GROUPS WITH 5+ VALUES



WHAT THE FILINGS SHOW

- 111 companies report air values in units that cannot be turned into tonnes: stack concentrations (mg/Nm^3) without flow or hours.
- Ten companies with more than 1 Mt of Scope 1 each report no air tonnage, including NLC India (31.6 Mt) and Coal India (28.2 Mt).
- Coal generators run continuous monitors and report mass, and their figures agree: SOx is 3.0–5.0 kg per t of Scope 1 CO2 across eight of them.
- In cement the same ratio ranges 60-fold (Shree Cement 0.005 kg to UltraTech 0.31 kg), so methods differ even where all ten report.

THE NUMBER CAN SUPPORT

A separate within-group air rank where at least 8 peers report a mass.

IT CANNOT SUPPORT

Health exposure (no PM size, no location), sources covered, or any cross-sector comparison.

Findings: CNPI analyst review of the same files (insights/pressures), checked against the current build.

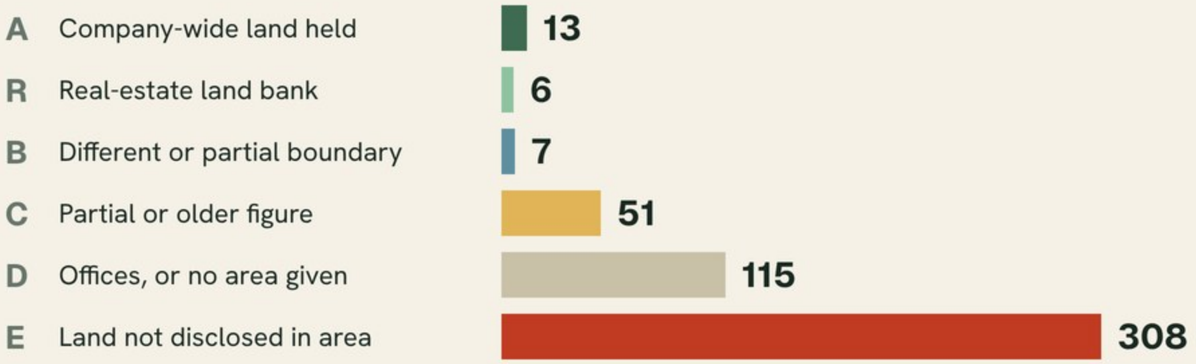
One BRSR rule, air reported as mass in tonnes, would make air comparable across companies.

LIGHT GREEN = FINANCIAL GROUPS

Land and sites: 423 of 500 companies give no land area

We show land as evidence and score none of it. Categories come from the independent Hermes search of all 500 companies' filings and reports.

COMPANIES BY BEST LAND EVIDENCE FOUND



252
sites with an area

10
sites with coordinates

13
companies state a site is in or near a sensitive area

WHAT THE FILINGS SHOW

- 140 companies give at least one site area (252 sites), and 10 sites carry printed coordinates, too few to screen overlap with protected areas.
- Of 87 sensitive-area answers found (59 companies), most are denials or blank placeholders; 13 companies state that a site is in, near or surrounded by a sensitive area.
- Owned, leased, mining-lease and land-bank areas are different quantities: Oil India's 482,884 ha is the area of 25 petroleum mining leases, not land occupied.
- IIM Bangalore: 80.0% of the top 1,000 report operations in or around sensitive areas, yet 76.0% have no credible biodiversity disclosure.

THE EVIDENCE CAN SUPPORT
That a company holds land, and where some of its sites are.

IT CANNOT SUPPORT
Any rank, any biodiversity-impact estimate, or a peer comparison.

Land is the missing disclosure: without it there is no biodiversity rank.

API makers fill the bottom of the table. The top three carry naming cautions, so GSK (4th) is the highest-ranked like-for-like drug maker.

38	Concord Biotech	7.7
39	Divi's Laboratories	7.1
40	Laurus Labs	5.1

TAKEAWAYS

01 Eight of the bottom nine (32nd to 40th) list APIs or fermentation as their main activity, among them Laurus, Divi's, Concord and Aurobindo. Energy intensity spans 868 times, from 1.6 GJ per ₹ crore (AstraZeneca) to 1,373 (Concord Biotech).

02 Five ranked members carry naming cautions. AstraZeneca (1st) imports and markets most of its medicines. Pfizer and Eris (joint 2nd) report Scope 1 of 39 t and 319 t, low enough to suggest outsourced manufacture. Cipla (15th) and Onesource (18th) report Scope 1 above what their fuel could emit. GlaxoSmithKline Pharmaceuticals is the highest-ranked like-for-like company (89.1, 4th).

03 The median renewable share is 36.7%, and 11 of 40 pass half. Granules climbs from 29th on gross figures to 17th net and Dr Reddy's from 15th to 6th. Anthem Biosciences recovers none of its waste and drops from 24th to 30th.

04 Aurobindo emits 22.2% of the group's Scope 1+2. Alembic (17.4%) and Lupin (16.5%) hold a third of its unrecovered waste.

05 Pharma has the most air reporters of any group (27 of 40, 26 air-ranked). Jubilant Pharmova ranks first on air.

Greenhouse-gas intensity varies 392× across the 40 ranked drug makers

Each dot is one ranked company's net pressure per ₹ crore of revenue (log scale). Dashed line: median. A log scale cannot show zeros or full offsets.

25	Balkrishna Industries	17.3
26	Asahi India Glass	9.6
27	Happy Forgings	5.8

TAKEAWAYS

01 Climate intensity spans 224 times: 0.46 tCO2e per ₹ crore at Bosch, 103.5 at Asahi India Glass. The median is 18.4; the middle half sits between 9.4 and 27.5.

02 The five tyre makers rank 17th to 25th of 27 (Apollo 17, Ceat 18, JK Tyre joint 19, MRF 23, Balkrishna 25). MRF (20.2%) and Balkrishna (14.2%) emit 34.4% of the group's Scope 1+2.

03 Bought electricity drives this group's climate score. Scope 2 makes up a median 78% of Scope 1+2 and passes half for 20 of 27 companies. Five companies draw over 50% of their energy from renewables (median 20.7%), with Bosch at 88% and ZF CV at 72%. Bosch ranks 4th (84.6); CNPI accepts its zero Scope 2 because it reports 100% renewable electricity.

04 JBM Auto holds 50.2% of the group's unrecovered waste. The median company recovers 95% of its waste, and 15 of 27 recover at least 90%. Happy Forgings recovers none and ranks last.

05 Tenneco Clean Air India is the highest-ranked like-for-like company (94.2), with ZF CV next (93.3). Both earn under ₹4,100 crore. Across the group, size has no link to score (rank correlation −0.01).

Not ranked here: 2 (Schaeffler India, CIE Automotive India); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 224× across the 27 ranked companies

4	Shriram Pistons & RINGS	0.278
5	UNO Minda	0.289
6	Bosch	1.75

WHERE REPORTING MUST IMPROVE

Bombay Burmah (22nd) carries a naming caution. Its Scope 1 of 13,295 t works out to 0.33 t per GJ of non-renewable energy; burning fuel gives at most about 0.1.

Air: 16 of 27 ranked companies report NOx, SOx and PM in tonnes. CNPI holds back Motherson Sumi Wiring's air figure, about 1/10,000 of the peer median.

Land: no company reports a company-wide figure, and five give a partial or older one. Bombay Burmah describes its Singampatti estates as land 'classified as Tiger reserve under the Wildlife Protection Act'. That disclosure belongs in a land view.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

More than half the group draws at least half its energy from renewables. Offsets move more than half its members by three or more places.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ · † check before naming · 27 ranked of 28 · Highest-ranked like-for-like: United Spirits (#1)

TAKEAWAYS

01 The median renewable share is 54.7%, and 15 of 27 pass half; Cupid (99.4%) and United Spirits (94.2%) top the list. Net and gross ranks correlate at 0.85, and 15 of 27 companies move three or more places.

02 LT Foods (91.8% renewable) climbs from 16th on gross figures to 6th net, Nestlé India from 24th to 16th and United Spirits from 7th to 1st. Allied Blenders recovers none of its waste and drops from 11th to 20th; Cupid (₹358 crore revenue, no waste recovery) drops from 5th to 12th.

03 Hindustan Unilever (4th), United Breweries (13th) and Cupid (12th) rank on a zero Scope 2, which CNPI accepts because they report 96–100% renewable electricity. HUL has the group's lowest climate intensity (0.11 tCO2e per ₹ crore), which widens the climate spread to 954 times (E.I.D. Parry 104.4).

04 ITC emits 27.0% of the group's Scope 1+2 and ranks 23rd. It returns 63.5% of the water it withdraws, the group's highest share. Radico Khaitan recovers none of its waste and holds 46.8% of the group's unrecovered waste; United Breweries holds 18.1%.

05 Water spans 832 times (P&G Hygiene 1.85, E.I.D. Parry 1,538 kL per ₹ crore). E.I.D. Parry, a sugar company, ranks last. 22 of 27 ranked companies report air in tonnes.

Not ranked here: 1 (Varun Beverages); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 954× across the 27 ranked FMCG companies

2	Gillette India	0.274
4	Marico	0.420
5	Colgate-Palmolive (India)	0.810

WHERE REPORTING MUST IMPROVE

Three ranked companies carry naming cautions because their Scope 1 is more than their reported fuel could emit: Avanti Feeds (10th), Cupid (12th; 41.5 t per GJ of non-renewable energy) and Allied Blenders (20th; 0.75 t per GJ). Varun Beverages stays unranked because it reports on a calendar year.

Waste: Cupid, Radico Khaitan and Allied Blenders report no recovery, against a group median of 98%.

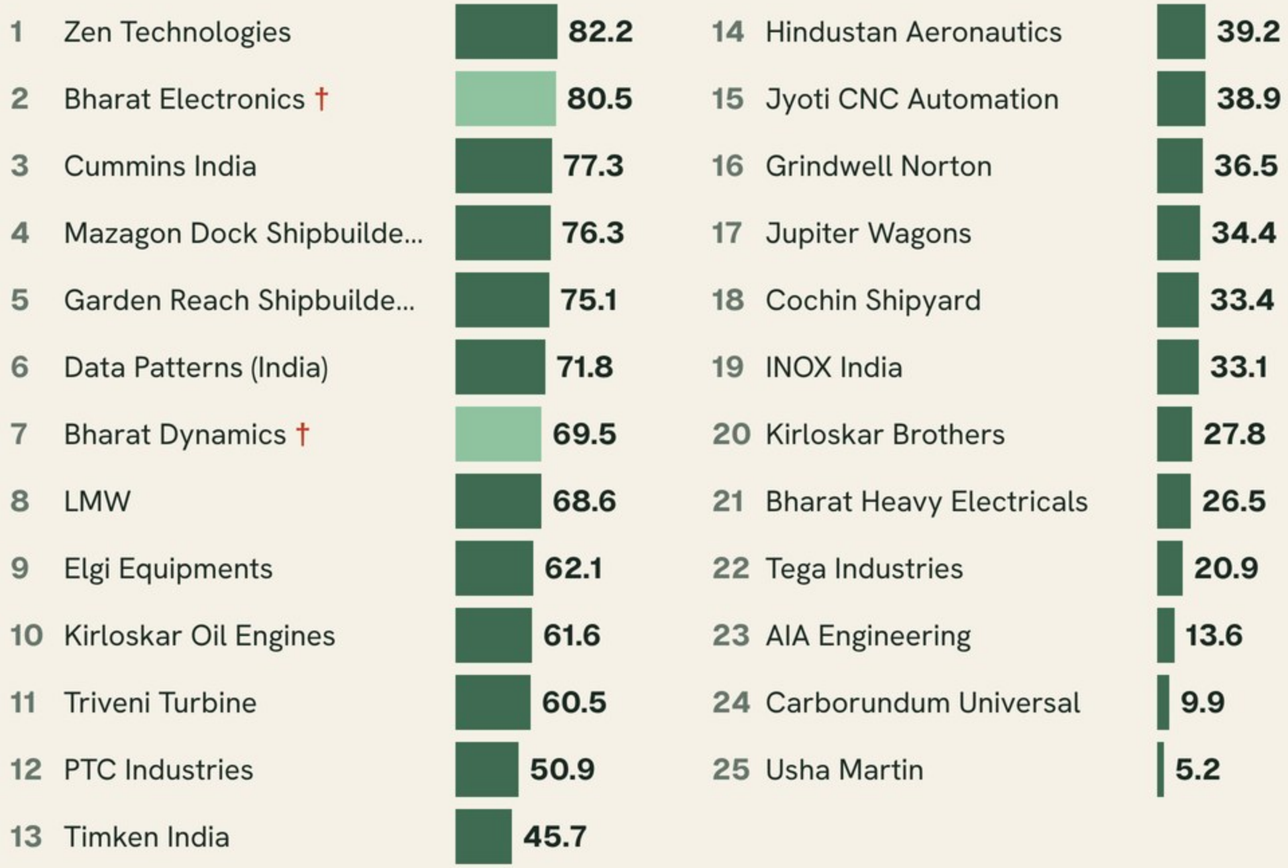
Land: no company gives a company-wide figure. HUL states that its Silvassa factory sits near the Dadra and Nagar Haveli Wildlife Sanctuary; Zydus Wellness states that forest surrounds its Sikkim plant.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Defence and shipbuilding companies sit at the top; foundry, abrasive and wire-rope makers sit at the bottom. Two public-sector manufacturers use 78% of the group's water.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ · † check before naming · 25 ranked of 31 · Highest-ranked like-for-like: Zen Technologies (#1)



TAKEAWAYS

01 Energy intensity spans about 1,000 times: 1.0 GJ per ₹ crore at Bharat Electronics, 1,028 at Usha Martin. Climate spans 320 times (BEL 0.30, Usha Martin 94.4 tCO2e per ₹ crore). The median climate intensity is 5.9; the upper quartile starts at 19.1.

02 Zen Technologies is the highest-ranked like-for-like company (82.2, 1st, on ₹424 crore of revenue), with Cummins India next (77.3, 3rd). Bharat Electronics ranks 2nd (80.5) but carries a naming caution: its Scope 1 of 8,110 t works out to 0.29 t per GJ of non-renewable energy, more than its fuel could emit. Bharat Dynamics (7th) carries the same caution.

03 The bottom four (Tega, AIA Engineering, Carborundum Universal, Usha Martin) make metal or mineral consumables: wear parts, high-chrome castings, abrasives and steel wire rope. AIA holds 44.5% of the group's unrecovered waste.

04 HAL (44.9%) and BHEL (33.3%) use 78% of the group's net water and rank 14th and 21st. They also hold the largest company-wide land figures: BHEL 6,754 ha and HAL 4,860 ha (BEL 1,245 ha).

05 The median company recovers 38% of its waste, among the lowest of the scored groups. PTC Industries recovers all of it and climbs from 18th on gross figures to 12th net; HAL recovers 0.09%. Mazagon Dock ranks 4th (76.3); it reported water use as a flat 20% of withdrawal, so CNPI scores it on withdrawal.

Not ranked here: 6 (Thermax, BEML, KSB, Ingersoll-Rand (India), SKF India (industrial), Azad Engineering); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 320× across the 25 ranked companies

AIR RANK · KG NOX+SOX+PM PER ₹ CRORE

11 ranked on mass. Lowest like-for-like (within 100× of the median):

2	Data Patterns (India)	0.789
3	Hindustan Aeronautics	3.65
4	Jyoti CNC Automation	6.27
5	Elgi Equipments	6.50

WHERE REPORTING MUST IMPROVE

CNPI holds back three values. Ingersoll-Rand's Scope 2 of 5,017 tCO2e implies more grid electricity than 1.5 times its total reported energy. Thermax's energy figure is a unit error, and BEML reports water consumption more than 10 times withdrawal.

BEL and Bharat Dynamics should reconcile Scope 1 with their fuel tables. Azad Engineering reports a zero Scope 1 and stays unranked; SKF India (Industrial) reports no climate or energy, and KSB has no revenue matched to the BRSR year.

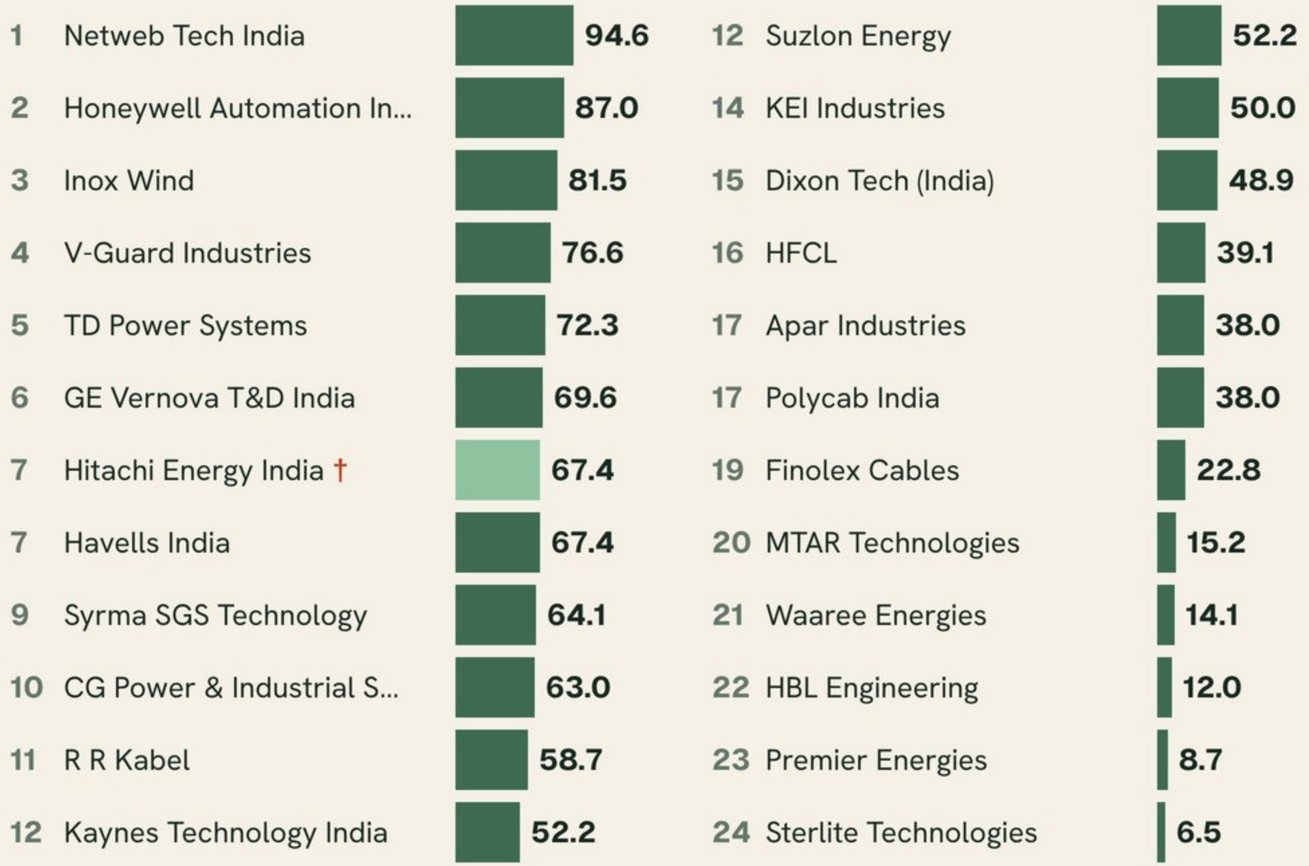
Air: 11 of 25 report. Land: three companies give company-wide figures and ten give partial or older ones. None of the 28 listed sites has coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Solar-module and optical-fibre makers sit at the bottom. Waaree Energies produces 62% of the group's unrecovered waste and 36% of its water use.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ · † check before naming · 24 ranked of 29 · Highest-ranked like-for-like: Netweb Technologies India (#1)



TAKEAWAYS

01 Climate intensity spans 68 times: 0.59 tCO2e per ₹ crore at Netweb Technologies, 40.4 at Sterlite Technologies. The middle half sits between 3.1 and 8.3, with a long upper tail.

02 The two solar PV makers rank 21st (Waaree) and 23rd (Premier Energies) of 24. They draw 5.3% and 6.6% of their own energy from renewables. Waaree accounts for 16.5% of group emissions, 35.6% of water consumption and 62.0% of net waste.

03 Scope 2 makes up a median 88% of emissions and passes half for 22 of 24, yet the median renewable share is 8.5%. Hitachi Energy (93.9%) and GE Vernova T&D (72.1%) stand apart; CNPI accepts their zero Scope 2 on 100% renewable electricity. Hitachi Energy climbs from 16th on gross figures to joint 7th net, the biggest gain in the group.

04 Kaynes recovers 4% of its waste and drops from 6th on gross figures to joint 12th net; Dixon (0.2%) drops from 9th to 15th. TD Power Systems returns 76% of the water it withdraws and climbs from 11th to 5th.

05 Pressures here move together (climate–water rank correlation 0.59). Dropping any one pressure leaves a rank correlation of at least 0.96. The highest-ranked like-for-like companies are Netweb (94.6), Honeywell Automation (87.0) and Inox Wind (81.5).

Not ranked here: 5 (ABB India, Siemens, Siemens Energy India, Aditya Infotech, Emmvee Photovoltaic P…); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 68× across the 24 ranked companies

Each dot is one ranked company's net pressure per ₹ crore of revenue (log scale). Dashed line: median. A log scale cannot show zeros or full offsets.

1	GE Vernova T&D India	0.226
2	HFCL	0.285
3	KEI Industries	0.867
4	Havells India	1.23

WHERE REPORTING MUST IMPROVE

5 of 29 members stay unranked. ABB India, Siemens and Siemens Energy India have no revenue matched to the BRSR year; Aditya Infotech and Emmvee report none of the four pressures.

Hitachi Energy (joint 7th) carries a naming caution: its Scope 1 of 7,263 t works out to 0.27 t per GJ of non-renewable energy, more than its reported fuel could emit. Air: 10 of 24 ranked companies report emissions in tonnes.

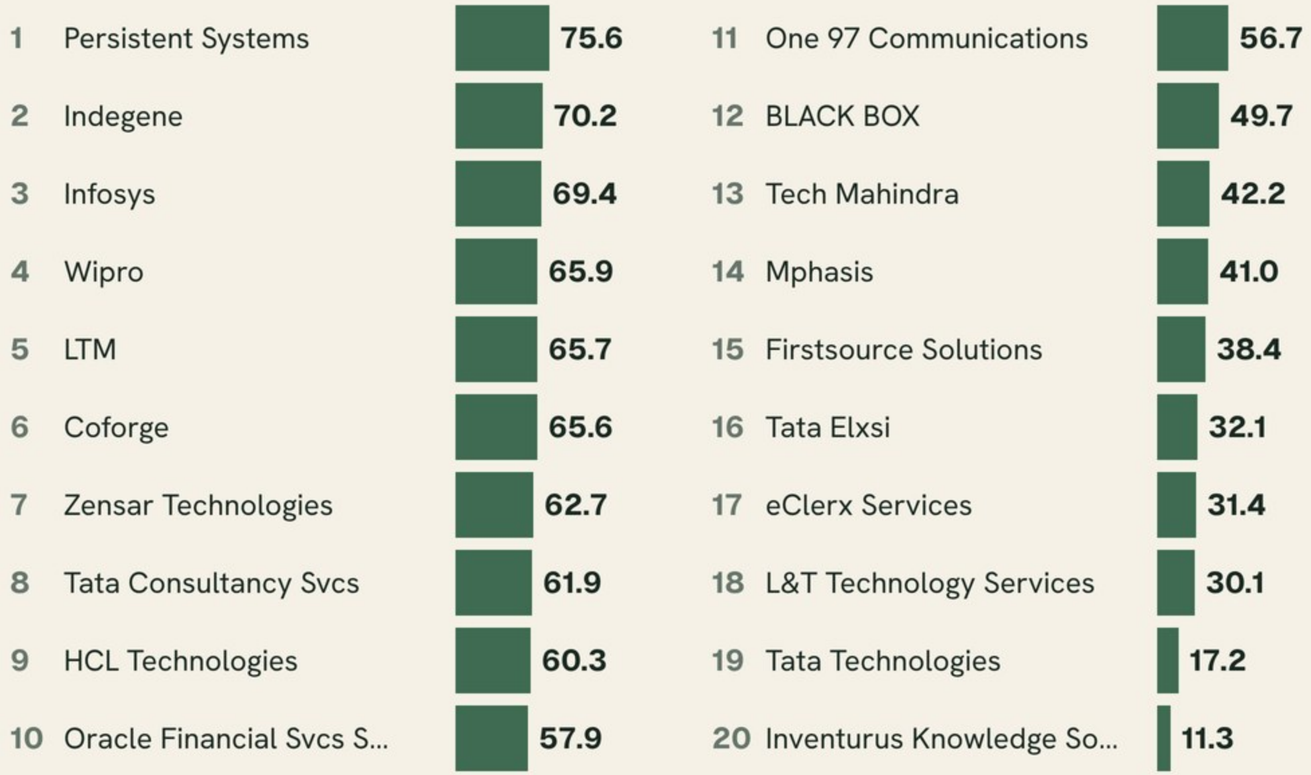
Land: Emmvee, an unranked company, gives the one company-wide figure (9.08 ha). One of the 15 listed sites has coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

IT draws the highest renewable share of any group. Offsets reshape its ranking more than in any other group.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ 20 ranked of 24 · Highest-ranked like-for-like: Persistent Systems (#1)



TAKEAWAYS

01 The median renewable share is 56.9%, and 11 of 20 pass half; Wipro draws 89.2%. Net and gross ranks correlate at 0.79, the lowest of the 24 groups.

02 Wipro climbs from 12th on gross figures to 4th net, Persistent from 6th to 1st and Infosys from 8th to 3rd. HCL Technologies drops from 4th to 9th and Oracle Financial Services from 5th to 10th.

03 Climate intensity spans 18 times (Indegene 0.12, Inventurus 2.23 tCO2e per ₹ crore). Larger firms rank higher (correlation between revenue and score 0.46).

04 Water runs against the other pressures (climate–water rank correlation −0.20). TCS uses 31.3% of the group's water and Infosys 22.4%.

05 Thirteen of 20 report air in tonnes, most of it from backup generators, and air rank shows no link to the main rank (0.17). Persistent (75.6) is the highest-ranked like-for-like company. Indegene (70.2) comes next: first on climate and energy, last on waste.

Not ranked here: 4 (Hexaware Technologies, KPIT Technologies, Pine Labs, Fractal Analytics); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 18× across the 20 ranked IT companies

2	LTM	0.00305
3	One 97 Communications	0.00858
4	KPIT Technologies	0.00910

WHERE REPORTING MUST IMPROVE

CNPI holds back KPIT's energy figure (about 0.00003 GJ, a unit error). Pine Labs reports none of the pressures, Fractal Analytics reports no energy or waste, and Hexaware reports on a calendar year.

Land: Tech Mahindra gives the one company-wide figure (209 ha, 13 locations). TCS states that its Kalinga Park campus in Bhubaneswar, the ILDC host city, lies near the Chandaka Wildlife Sanctuary.

Scope 2 basis: with renewable shares this high, the market or location basis decides the climate score. Each company should state which it uses.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Hotels and quick-service restaurants sit at the bottom. The top two, a distributor and a delivery platform, carry naming cautions, and the group spans 748 times on climate because it holds several industries.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ † check before naming 19 ranked of 27 · Highest-ranked like-for-like: Lenskart Solutions (#3)

TAKEAWAYS

01 The five hotel companies rank 13th to 16th and 19th of 19. The two quick-service restaurant chains rank 11th (Jubilant) and 18th (Devyani).

02 Climate intensity spans 748 times, from 0.045 tCO2e per ₹ crore (Redington) to 33.9 (Devyani). Water spans 1,426 times, up to Ventive Hospitality's 405 kL.

03 Redington (1st) reports climate, energy and water values 120 to 178 times below the median. Swiggy (2nd) runs an online platform; its delivery fleet and restaurants sit outside its Scope 1 and 2. Both carry naming cautions, so Lenskart is the highest-ranked like-for-like company (77.3, 3rd).

04 Avenue Supermarts (DMart) recovers none of its waste and holds 67.8% of the group's unrecovered waste. It also emits 18.5% of the group's Scope 1+2 and ranks 8th.

05 Scope 2 makes up a median 90% of emissions, yet no company passes half renewable energy (Chalet Hotels highest, 46%). Brainbees, Travel Food Services and Devyani reported water use as a flat 20% of withdrawal; CNPI scores them on withdrawal.

Not ranked here: 8 (Eternal, Meesho, ITC Hotels, Physicswallah, Metro Brands, Urban Company and more); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 748× across the 19 ranked companies

5	Lenskart Solutions	0.435

WHERE REPORTING MUST IMPROVE

CNPI holds back Eternal (Zomato) on all four pressures. Each value sits between 1/370 and 1/1,111 of the median, which points to a boundary problem.

Eight of 27 members stay unranked. ITC Hotels, Physicswallah and Urban Company report no pressures. Meesho reports zero Scope 1 and BLS International zero waste. CNPI holds back Metro Brands' waste figure, and International Gemological Institute has no matching revenue year.

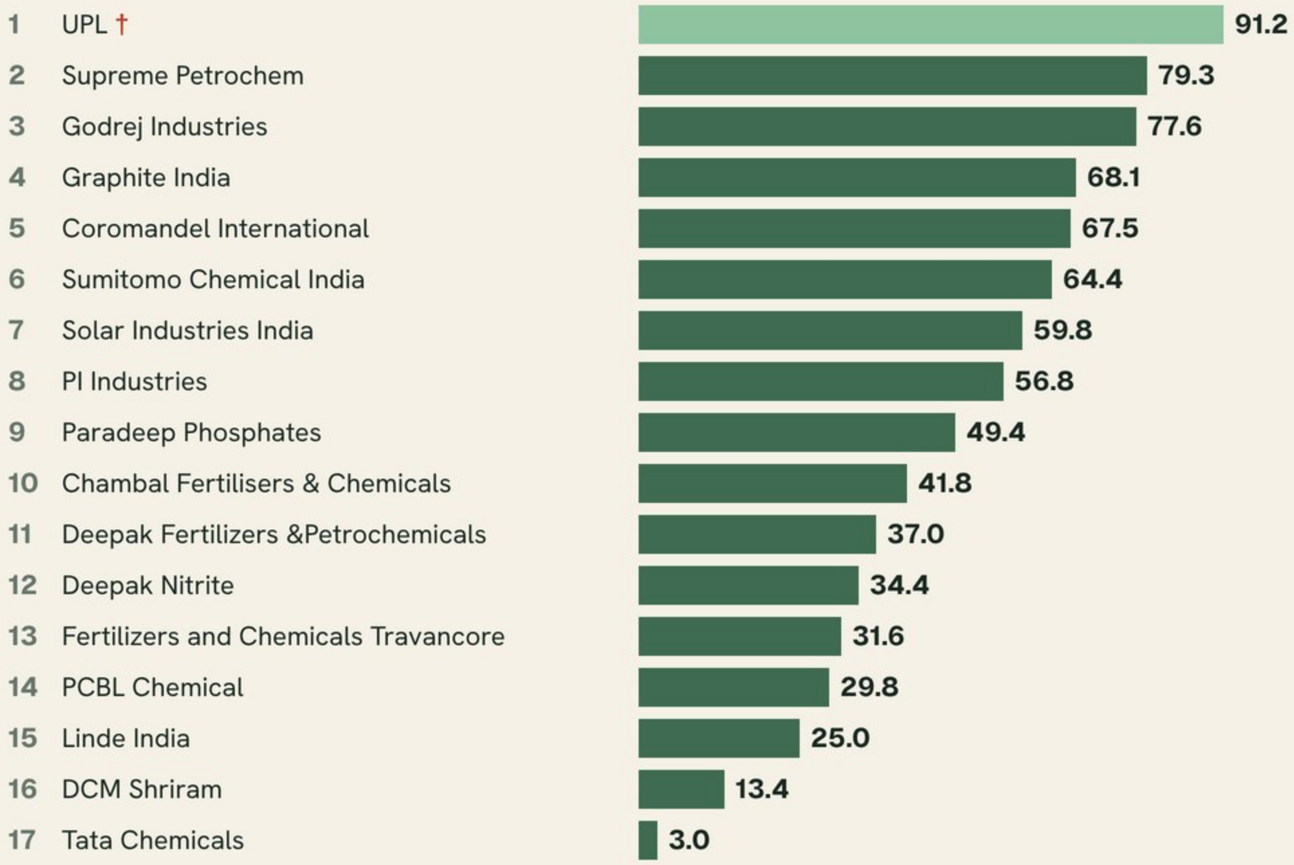
Air: 11 of 19 report. Land: Chalet gives one partial figure; none of the 11 listed sites has coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Soda ash, chlor-alkali and industrial-gas makers fill the bottom of the table. Tata Chemicals and DCM Shriram emit half of the group's Scope 1+2.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ | † check before naming | 17 ranked of 18 · Highest-ranked like-for-like: Supreme Petrochem (#2)



TAKEAWAYS

01 Climate intensity spans 153 times: 3.0 tCO2e per ₹ crore at UPL (standalone), 458.6 at Linde India. Energy spans 255 times, from 26 GJ (UPL) to 6,692 (PCBL, carbon black).

02 Tata Chemicals ranks last (3.0). It emits 28.0% of the group's Scope 1+2, uses 24.9% of its water and holds 47.2% of its unrecovered waste. It also returns 76% of the water it withdraws, the group's highest share. DCM Shriram (16th) adds 22.0% of emissions.

03 Godrej Industries draws 68.2% of its energy from renewables; the median is 7.4%. Paradeep Phosphates recovers all its waste and climbs from 15th on gross figures to 9th net. Solar Industries recovers 16% and drops from 3rd to 7th.

04 UPL ranks 1st but carries a naming caution: its standalone boundary covers a small part of a global group. Supreme Petrochem is the highest-ranked like-for-like company (79.3, 2nd). Climate and water intensity show almost no link (rank correlation 0.16), so water reorders the table.

05 Paradeep Phosphates describes its 2,280-acre site as 'a vital habitat for over 30,000 migratory birds from more than 50 species'. No other company in the dataset gives a clearer site-level biodiversity statement.

Not ranked here: 1 (Himadri Speciality Ch…); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 152× across the 17 ranked companies

1	Solar Industries India	5.39
2	PI Industries	26.1
3	Coromandel International	27.9
4	Godrej Industries	30.8

WHERE REPORTING MUST IMPROVE

Himadri Speciality Chemical stays unranked: it reports zero Scope 2 and no renewable energy, a combination it needs to correct.

CNPI holds back UPL's air figure (0.13% of the peer median). Four ranked companies do not report air in tonnes.

Land: FACT gives the one company-wide figure (607 ha). Tata Chemicals (Mithapur) and UPL (Ankleshwar Unit 3) answer 'yes' on sensitive areas but give no area or distance.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Pipe and tube converters that buy their steel take four of the top five places. Jindal Stainless (3rd) is the highest-ranked steel maker, and the three integrated majors emit three-quarters of the group's Scope 1+2.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ · † check before naming · 15 ranked of 17 · Highest-ranked like-for-like: Jindal Stainless (#3)

TAKEAWAYS

01 APL Apollo (1st), Ratnamani (2nd), Tube Investments (4th) and Welspun Corp (5th) carry like-for-like cautions: their suppliers carry the steel-making emissions in their own Scope 1. Jindal Stainless (81.4) and Tata Steel (60.2, 6th) are the highest-ranked like-for-like companies.

02 Climate intensity spans 309 times, from 6.4 tCO2e per ₹ crore (APL Apollo) to 1,963 (Sarda Energy). The median of 463 is the second-highest of any group.

03 Tata Steel (27.0%), JSW Steel (24.0%) and SAIL (22.8%) emit 73.9% of the group's Scope 1+2. SAIL uses 43.5% of the group's water.

04 Offsets make little difference. The median renewable share is 1.1% (Tube Investments highest, 31.7%); gross and net ranks agree at 0.97, and companies move 0.5 places on average.

05 Jindal Saw recovers 1% of its waste and holds 34.0% of the group's unrecovered waste. Eight of 15 recover at least 90%.

Not ranked here: 2 (Shyam Metalics & Ener…, Gallantt Ispat); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 309× across the 15 ranked companies

9 ranked on mass. Lowest like-for-like (within 100× of the median):

3	Jindal Stainless	214
4	Steel Authority of India	403
5	JSW Steel	560
6	Tata Steel	737

WHERE REPORTING MUST IMPROVE

CNPI holds back Shyam Metalics because its Scope 2 implies an electricity bill larger than its revenue. It also holds back Gallantt Ispat's energy figure (near zero) and Ratnamani's air figure.

KIOCL does not state its BRSR boundary.

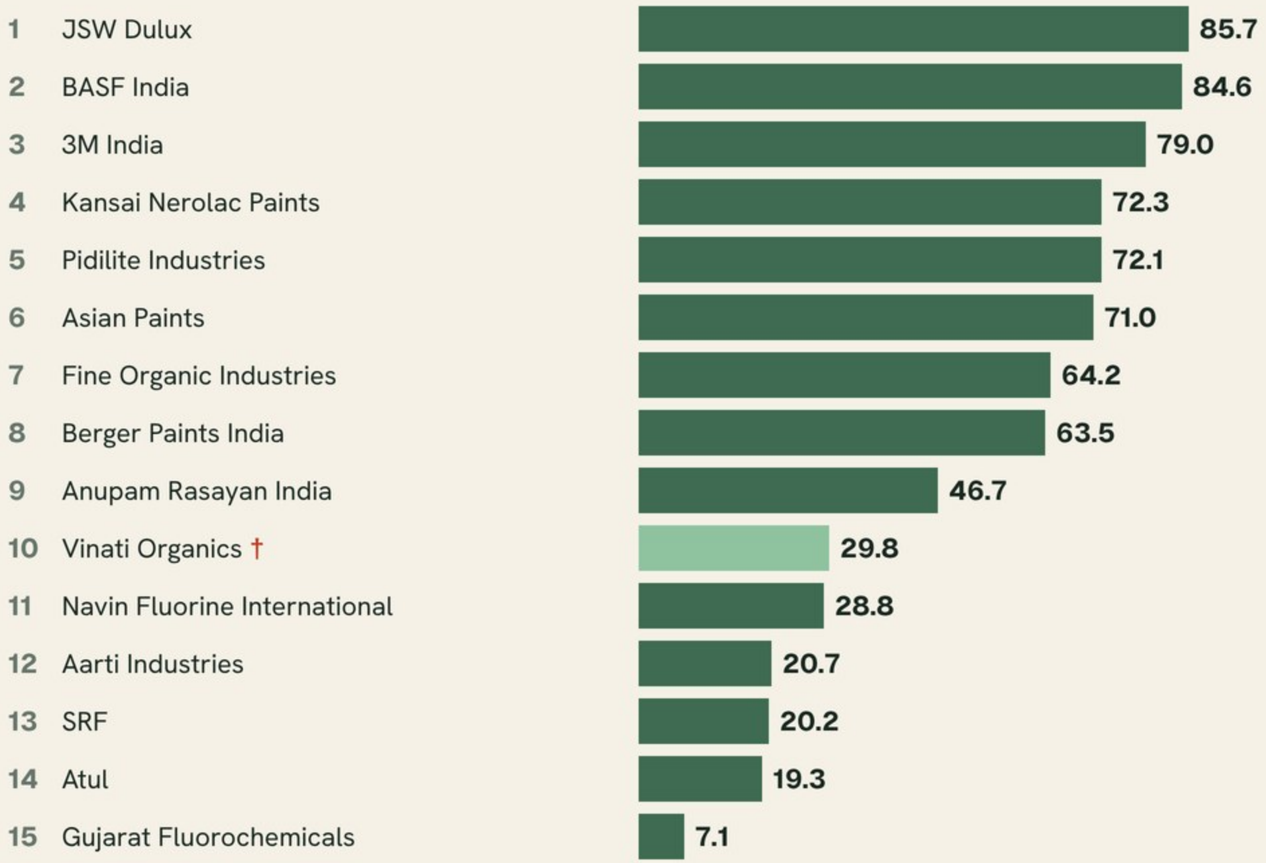
Land: JSW Steel (8,380 ha, India operations), NMDC Steel (728 ha, its only plant) and the unranked Shyam Metalics (739 ha) give company-wide figures. NAVA's 36,000 ha manganese concession in Côte d'Ivoire covers a subsidiary. NMDC Steel states that its Nagarnar plant sits close to reserved forest.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Paint and adhesive formulators take five of the top eight places. Fluorochemical and synthesis makers fill the bottom and emit close to two-thirds of the group's Scope 1+2.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ · † check before naming · 15 ranked of 17 · Highest-ranked like-for-like: JSW Dulux (#1)



TAKEAWAYS

01 Intensity splits into two clusters. Climate runs from 1.7 tCO2e per ₹ crore (JSW Dulux) to 157.1 (Gujarat Fluorochemicals), 93 times, and the middle half spans 3.7 to 108.1.

02 SRF (28.8%), Aarti Industries (19.5%) and Gujarat Fluorochemicals (15.4%) emit 63.6% of the group's Scope 1+2 and rank 13th, 12th and 15th. SRF and Navin Fluorine hold 53.7% of its unrecovered waste.

03 JSW Dulux, Kansai Nerolac, Pidilite, Asian Paints and Berger all rank in the top eight. JSW Dulux (85.7) and BASF India (84.6) are the highest-ranked like-for-like companies.

04 Pidilite (53% renewable, 45% of water returned) climbs from 8th on gross figures to 5th net. Berger recovers 9.6% of its waste and drops from 4th to 8th.

05 13 of 15 report air in tonnes. Vinati Organics has the highest air intensity (0.73 t per ₹ crore).

Not ranked here: 2 (Castrol India, PRIVI Speciality Chem…); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 93× across the 15 ranked companies

Waste not recovered **0.3%** Air pollution **3.2%**

AIR RANK · KG NOX+SOX+PM PER ₹ CRORE

13 ranked on mass. Lowest like-for-like (within 100× of the median):

1	JSW Dulux	0.283
2	BASF India	0.871
3	Asian Paints	2.19
4	Pidilite Industries	4.39

WHERE REPORTING MUST IMPROVE

CNPI holds back PRIVI Speciality on two counts: it reports water consumed above 10 times water withdrawn, and waste recovered above 1.5 times waste generated.

Vinati Organics (10th) carries a naming caution: its Scope 1 of 311,643 t is more than its reported fuel could emit. CNPI holds back 3M India's air figure (0.1% of the median), and Castrol stays unranked because it reports on a calendar year.

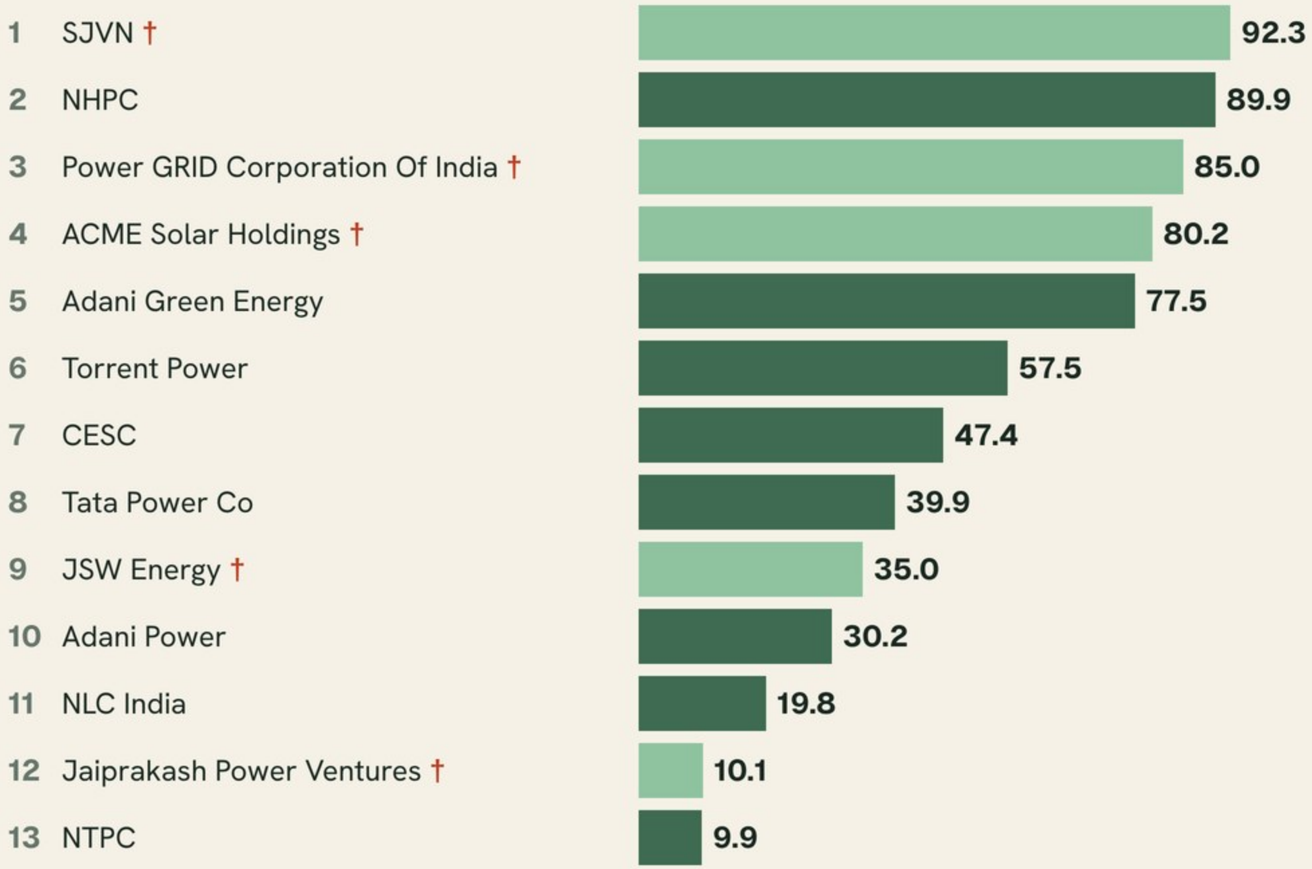
Land: no company gives a company-wide figure. 8 companies list 9 sites, and one gives coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Hydro and renewable generators take the top five places per rupee. Per megawatt-hour, coal generators climb as many as five places.

Score 0–100: average of climate, energy and water scores · higher = lower pressure per ₹ · † check before naming · 13 ranked of 17 · Highest-ranked like-for-like: NHPC (#2)



TAKEAWAYS

01 Climate intensity spans 1,202 times, from 3.0 tCO2e per ₹ crore (SJVN) to 3,614 (Jaiprakash Power), the widest climate spread of any group.

02 Per megawatt-hour (rank correlation 0.85), NTPC climbs from 13th to joint 8th, Jaiprakash from 12th to 7th, Adani Power from 10th to 6th and JSW Energy from 9th to 5th. Scope 1+2 per MWh runs from 0.59 t (JSW Energy) to 1.31 t (Jaiprakash); NTPC sits at 0.88.

03 NTPC emits 59.1% of the group's Scope 1+2 and uses 57.5% of its water. With Adani Power and JSW Energy, three companies hold 82.5% of emissions.

04 Five ranked members carry naming cautions. SJVN (1st), Power Grid (3rd) and ACME Solar (4th) report values 100–300 times from the median. JSW Energy (9th) and Jaiprakash (12th) report Scope 1 above what their fuel could emit. NHPC is the highest-ranked like-for-like company (89.9, 2nd).

05 Returned water is the group's main offset: 8 of 13 return at least half of what they withdraw (median 56%; Tata Power highest at 92.8%). Larger companies rank worse (correlation between revenue and score −0.45).

Not ranked here: 4 (Adani Energy Solutions, Vedanta Power, Clean Max Enviro Ener…, Reliance Power); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 1,202× across the 13 ranked companies

Waste not recovered **0.1%** Air pollution **13.5%**

AIR RANK · KG NOX+SOX+PM PER ₹ CRORE

8 ranked on mass. Lowest like-for-like (within 100× of the median):

1	Torrent Power	854
2	Tata Power Co	2,271
3	CESC	3,127
4	Adani Power	7,606

WHERE REPORTING MUST IMPROVE

Fly ash: five coal generators (Adani Power, JSW Energy, NLC, Jaiprakash, Reliance Power) report waste 400 to 23,000 times the peer median; NTPC reports about 57,000 t. Generators need one common way to report ash.

Reliance Power stays unranked because it reports zero Scope 2. CNPI holds back Adani Energy Solutions' water figure and the SJVN and NHPC air figures.

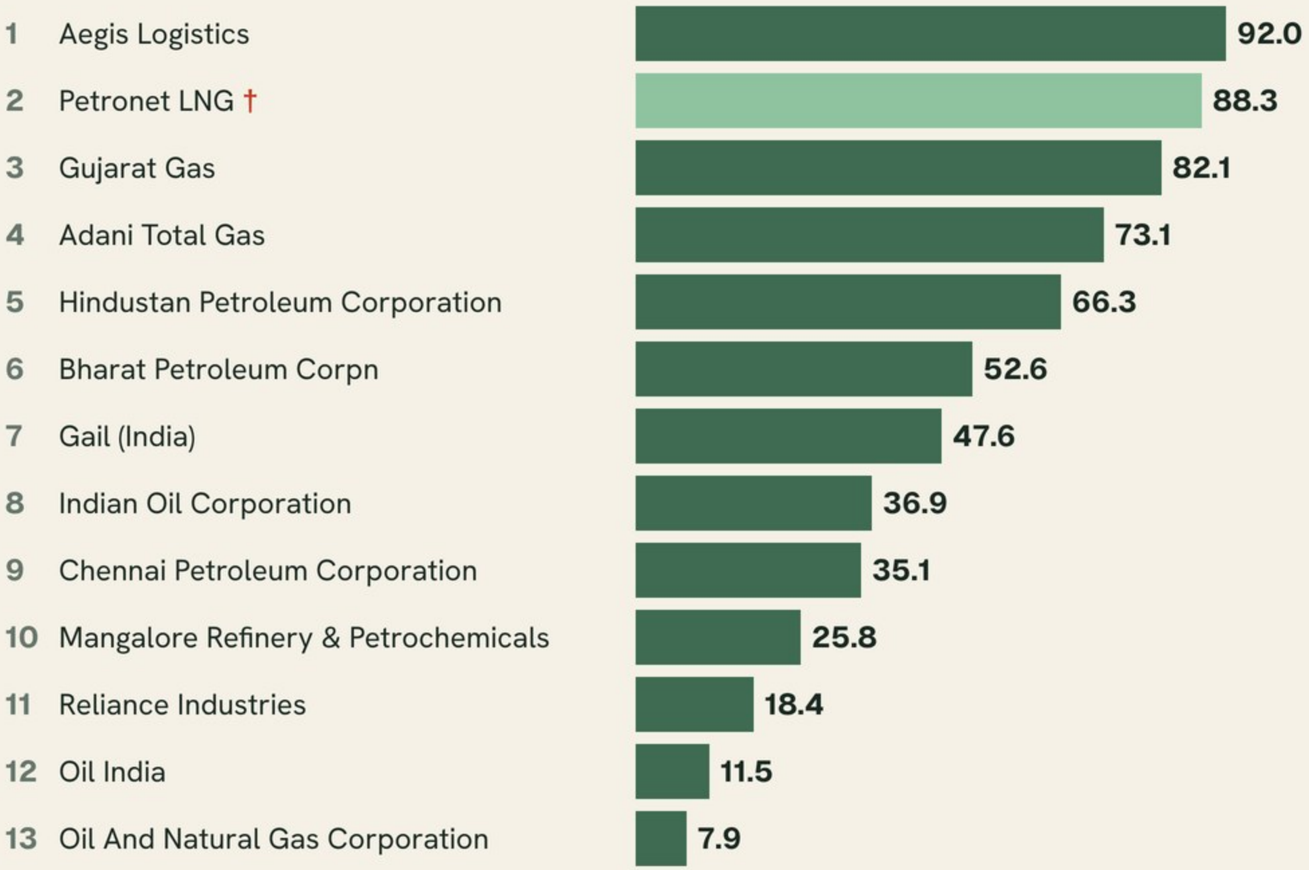
Land: no company gives a land-held figure; ACME Solar's one statement covers acreage its team has acquired. No company makes a sensitive-area statement, though SJVN and NHPC run hydro projects in the Himalaya.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Gas logistics and distribution companies sit at the top and upstream producers at the bottom. Larger companies rank worse (correlation between revenue and score −0.40).

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ · † check before naming · 13 ranked of 15 · Highest-ranked like-for-like: Aegis Logistics (#1)



TAKEAWAYS

01 ONGC (13th), Oil India (12th) and Reliance Industries (11th) fill the bottom. Aegis Logistics is the highest-ranked like-for-like company (92.0, 1st). Petronet LNG (2nd) carries a naming caution for a waste value 149 times below the median; Gujarat Gas ranks 3rd (82.1).

02 Reliance's standalone filing accounts for 38.8% of the group's Scope 1+2 and 45.2% of its water. IOC adds 22.0% of emissions.

03 Water intensity spans 226 times, from 1.7 kL per ₹ crore (Petronet LNG) to 390 (Reliance). Climate spans 62 times.

04 The median renewable share is 0.35%, and Scope 2 makes up a median 8% of emissions. Gross and net ranks agree at 0.98.

05 Gujarat Gas reported water use as a flat 20% of withdrawal; CNPI scores it on withdrawal, and it holds 3rd place.

Not ranked here: 2 (Indraprashtha Gas, Vedanta Oil and Gas); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 62× across the 13 ranked companies

4	Chennai Petroleum Corporation	30.2

WHERE REPORTING MUST IMPROVE

CNPI holds back Indraprastha Gas, which reports recovering more than 1.5 times the waste it generated and carries a water value 258 times below the median. CNPI also holds back the Adani Total Gas and IGL air figures. Vedanta Oil & Gas reports no pressures.

Air: 9 of 13 report in tonnes.

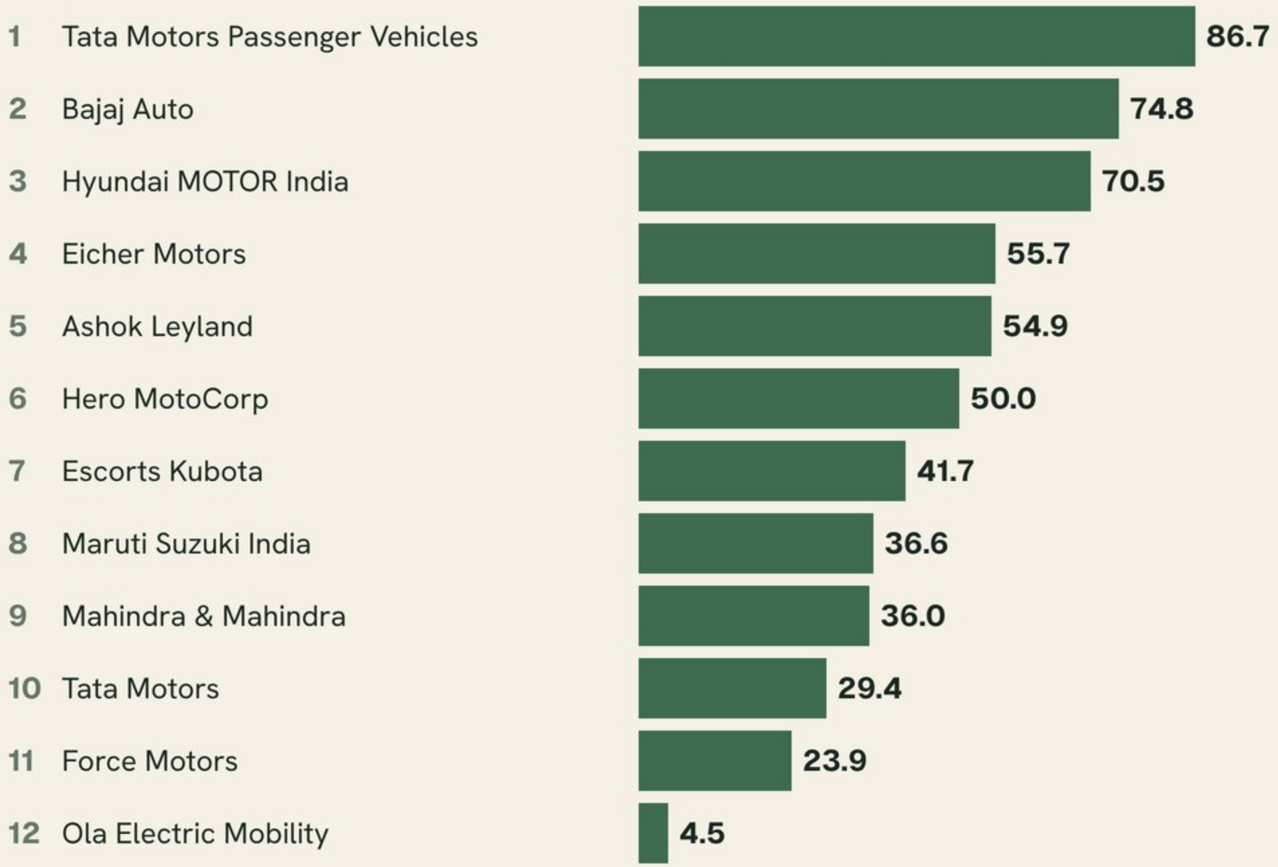
Land: Oil India's 482,884 ha is the area of 25 petroleum mining leases (FY2024-25). Companies should report lease area and surface footprint as separate figures.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Tata Motors Passenger Vehicles is the highest-ranked like-for-like company and has the lowest climate, energy and water intensity. Maruti Suzuki emits 36% of the group's Scope 1+2 and ranks 8th of 12.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ 12 ranked of 14 · Highest-ranked like-for-like: Tata Motors Passenger Vehic… (#1)



TAKEAWAYS

01 Spreads are narrow for manufacturers: 14 times on climate (1.02 tCO2e per ₹ crore at TMPV, 14.2 at Ola Electric), 7.8 times on water and 9.7 times on waste. The median is 2.17 tCO2e per ₹ crore.

02 Three companies emit 62.7% of the group's Scope 1+2: Maruti Suzuki 35.7%, Mahindra & Mahindra 17.7% and Tata Motors (commercial vehicles) 9.2%. Maruti uses 45.4% of the group's non-renewable energy.

03 Net and gross ranks correlate at 0.82, the second-lowest of the 24 groups. Ashok Leyland (56.8% renewable) climbs from 8th on gross figures to 5th net. Hero MotoCorp recovers 30% of its waste, the group's lowest, and drops from 3rd to 6th.

04 Eicher Motors draws 54% of its energy from renewables, yet ranks 11th of 12 on climate and mid-table on energy. That gap fits a Scope 2 figure calculated on grid averages, which ignores its renewable supply.

05 All 12 report air emissions in tonnes. Air rank has no link to the main rank (correlation −0.15): Hero MotoCorp ranks first on air, and Tata Motors (CV) has the highest air intensity.

Not ranked here: 2 (TVS Motor Company, Ather Energy); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 14× across the 12 ranked vehicle makers

TVS Motor Company HELD BACK pollution: waste recovered more than 1.5x waste generated

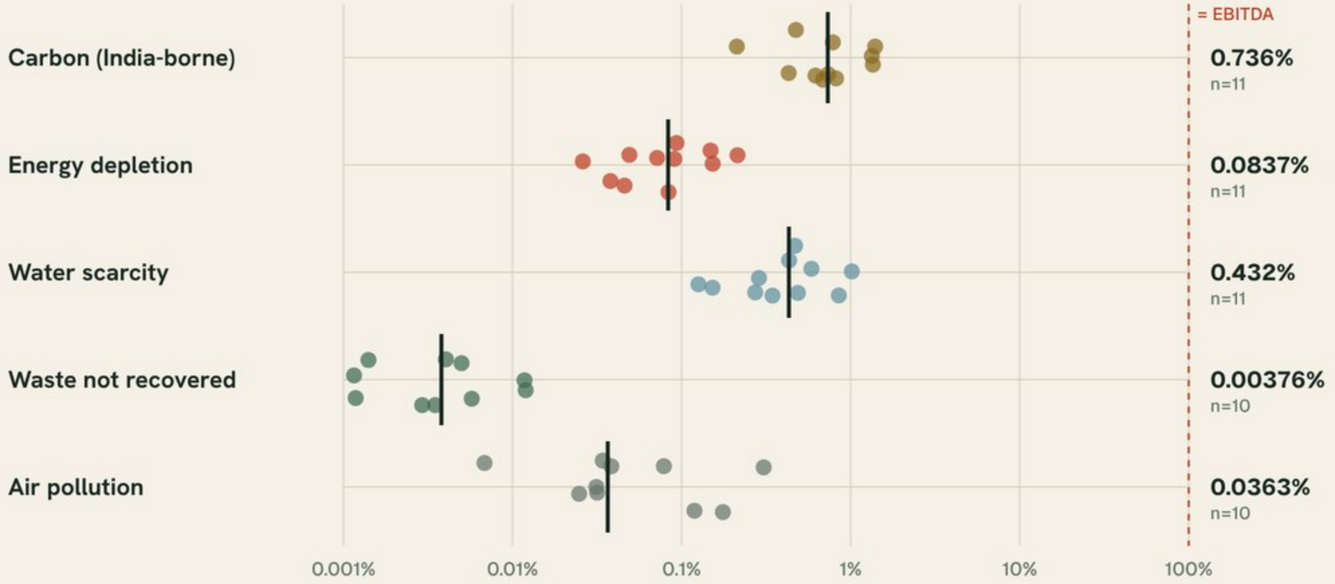
Ather Energy NOT REPORTED not reported: climate, energy, water, waste

Lower = less reported pressure per ₹ of revenue. Compare companies within this group.

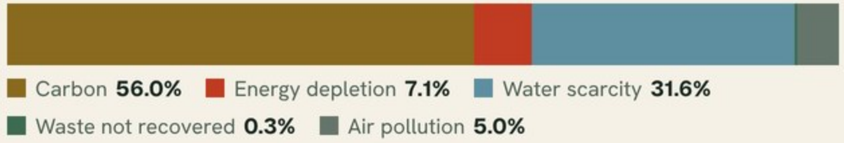
† CHECK BEFORE NAMING

Illustrative nature cost: a median 1.24% of EBITDA (middle half 0.936–2.11%; 0.212% of revenue); by pressure, carbon 56%, water scarcity 32%, energy depletion 7%

Each dot: one company's cost for one pressure as % of its EBITDA (log scale); black tick = median. Price set B, central. Hollow dot = EBITDA under 5% of revenue (unstable). The cost stays out of the rank, and we do not add companies.



SHARE OF THE GROUP'S COSTED TOTAL, BY PRESSURE



Carbon **56.0%** Energy depletion **7.1%** Water scarcity **31.6%**
Waste not recovered **0.3%** Air pollution **5.0%**

AIR RANK · KG NOX+SOX+PM PER ₹ CRORE

12 ranked on mass. Lowest like-for-like (within 100× of the median):

1	Hero MotoCorp	0.457
2	Ola Electric Mobility	1.16
3	Hyundai MOTOR India	1.63
4	TVS Motor Company	1.66

WHERE REPORTING MUST IMPROVE

Each company should state its Scope 2 basis (location or market). Eicher shows how that choice moves the climate score.

CNPI withholds TVS Motor's rank because TVS reports recovering more than 1.5 times the waste it generated. Ather Energy reports none of the four pressures.

Land: no company gives a company-wide figure. Ten companies list 22 sites (2,102 ha); three give coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

IRCON, RVNL and NBCC take the top three places. Their waste figures sit about 670–1,400 times below the peer median, which fits work done by subcontractors.

Score 0–100: average of climate, energy and water scores · higher = lower pressure per ₹ 12 ranked of 13 · Highest-ranked like-for-like: IRCON International (#1)

TAKEAWAYS

01 IRCON is the highest-ranked like-for-like company (93.9). Water intensity spans 430 times, from 0.71 kL per ₹ crore (RVNL) to 306 (IRB Infrastructure); climate spans 59 times and energy 132 times. IRB scores zero on all three scored pressures.

02 Larsen & Toubro emits 55.7% of the group's Scope 1+2, uses 55.9% of its non-renewable energy and 53.7% of its water, and ranks 7th of 12 (42.4).

03 The three scored pressures move together (climate–water rank correlation 0.92). Dropping any one leaves the order close to unchanged (minimum correlation 0.97).

04 Offsets make little difference. The median renewable share is 2.4% and the highest 11.6% (Engineers India). Net and gross ranks agree at 0.99, and companies move 0.2 places on average.

05 Eleven of 12 report returning some water (median 19% of withdrawal), the most consistent water-return reporting of any industrial group.

IRCON's waste figure appears unscored (pollution is not scored here) and is about 1/1,429 of the peer median. Not ranked here: 1 (Central Mine Planning…); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 59× across the 12 ranked companies

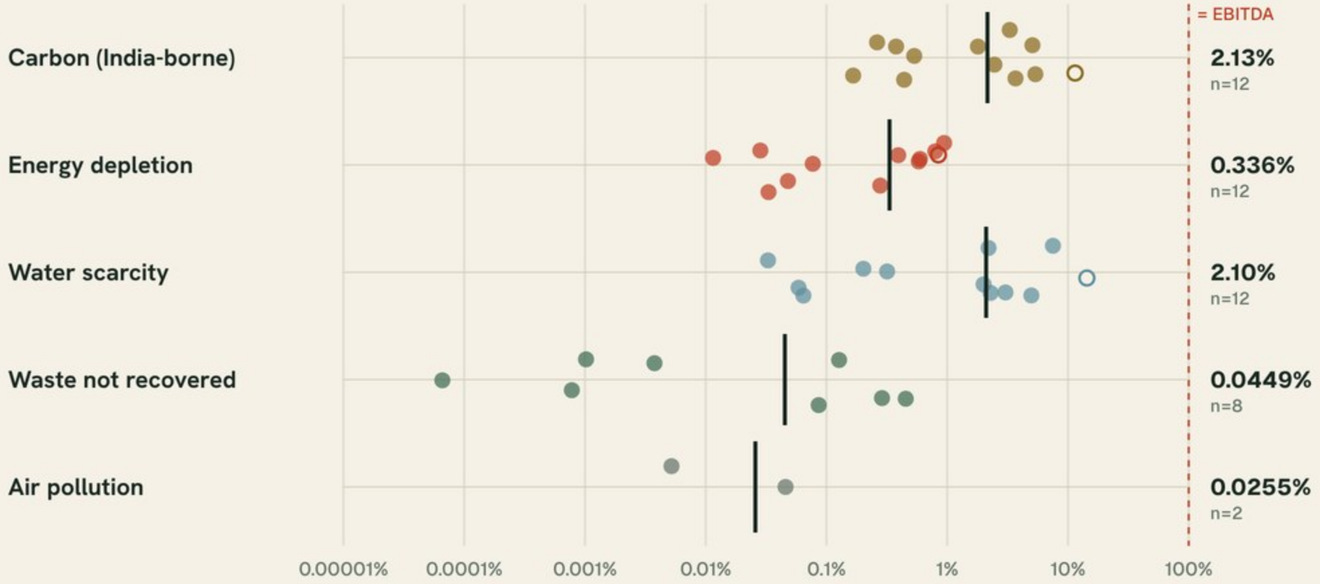
Central Mine Planning... NOT REPORTED not reported: climate, energy, water

Lower = less reported pressure per ₹ of revenue. Compare companies within this group.

† CHECK BEFORE NAMING

Illustrative nature cost: a median 4.68% of EBITDA (middle half 0.670–8.78%; 0.595% of revenue); by pressure, carbon 46%, water scarcity 45%, energy depletion 7%

Each dot: one company's cost for one pressure as % of its EBITDA (log scale); black tick = median. Price set B, central. Hollow dot = EBITDA under 5% of revenue (unstable). The cost stays out of the rank, and we do not add companies.



SHARE OF THE GROUP'S COSTED TOTAL, BY PRESSURE

Carbon **46.2%** Energy depletion **7.4%** Water scarcity **44.6%**

Waste not recovered **1.8%** Air pollution **0.2%**

AIR POLLUTION

2 of 13 companies report air emissions in tonnes: fewer than 8 usable, so no air rank.

WHERE REPORTING MUST IMPROVE

CNPI does not score pollution here. Companies report construction and demolition debris on different bases: RVNL, NBCC and IRCON report almost none, while L&T reports about 600,000 tonnes.

Air: 2 of 12 report in tonnes. Central Mine Planning & Design Institute reports no climate, energy or water data.

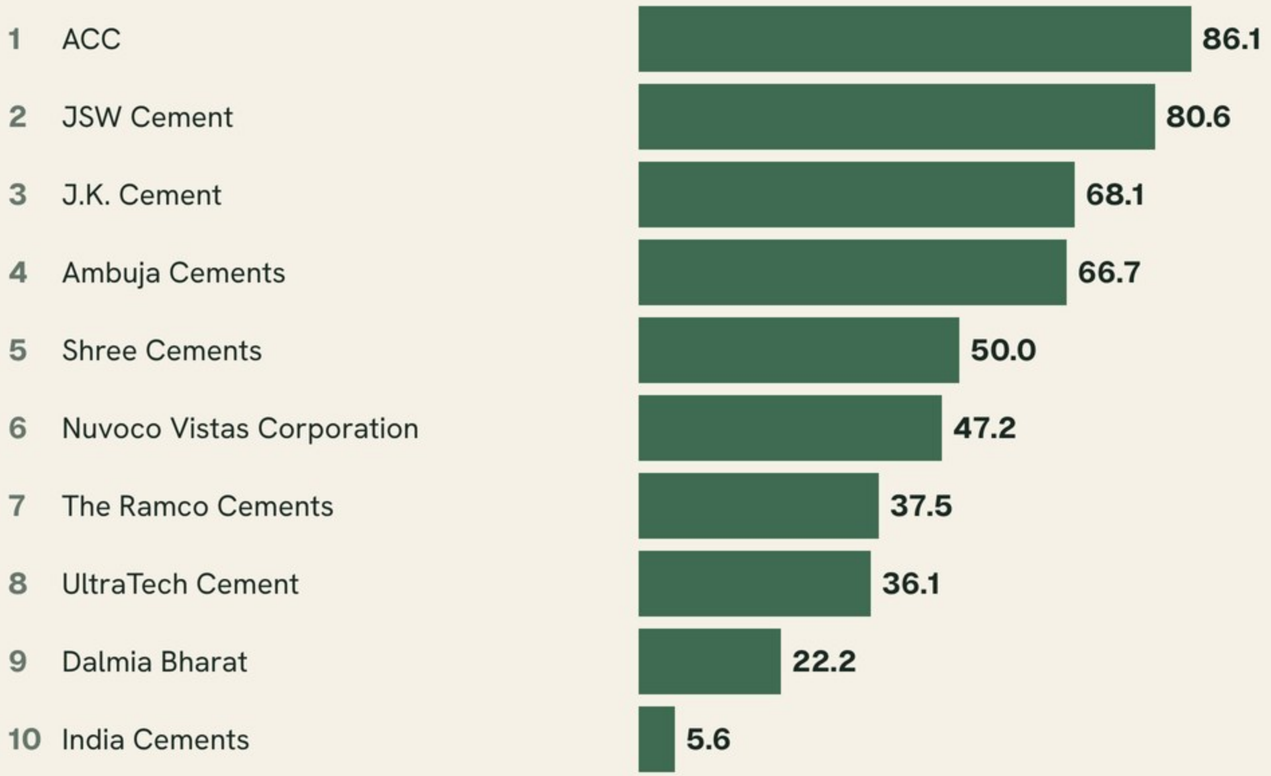
Land: four companies report office sites and no other land. L&T makes the group's sole sensitive-area statements: parts of its Hazira jetties and Kattupalli yard fall inside coastal regulation zones.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Cement shows the narrowest spread of any industrial group (2.7 times on climate). Small differences decide ranks, and switching from revenue to tonnes of cement reorders the middle of the table.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ 10 ranked of 10 · Highest-ranked like-for-like: ACC (#1)



TAKEAWAYS

01 Climate intensity runs from 555 tCO2e per ₹ crore (JSW Cement) to 1,490 (India Cements), a 2.7-times range. The median of 1,020 is the highest of any peer group. Per tonne of cement the range shrinks to 1.46 times (0.46 to 0.67 tCO2e/t).

02 Measured per tonne (rank correlation 0.88), Nuvoco climbs from 6th to 4th and Ramco from 7th to 5th. Ambuja drops from 4th to 6th and Shree from 5th to 7th. Shree has the highest Scope 1+2 per tonne in the group (0.67).

03 Scope 1 makes up almost all of cement's climate pressure; Scope 2 is a median 3%. No company passes 7.5% renewable energy. Offsets move ranks half a place on average, and no company moves three or more.

04 Nine of 10 recover at least 90% of their waste through co-processing. Dalmia Bharat recovers 0.016% and holds 90.7% of the group's unrecovered waste.

05 ACC is the highest-ranked like-for-like company (86.1). UltraTech emits 42.9% of the group's Scope 1+2, uses 53.5% of its water and ranks 8th. All 10 report air in tonnes, and air rank tracks the main rank (correlation 0.88).

Greenhouse-gas intensity varies 3× across the 10 ranked cement makers

4	Nuvoco Vistas Corporation	1,131

WHERE REPORTING MUST IMPROVE

Dalmia Bharat should check its waste-recovery figure against its co-processing disclosures.

Water: 2 of 10 report returning any water, against median consumption of 243 kL per ₹ crore.

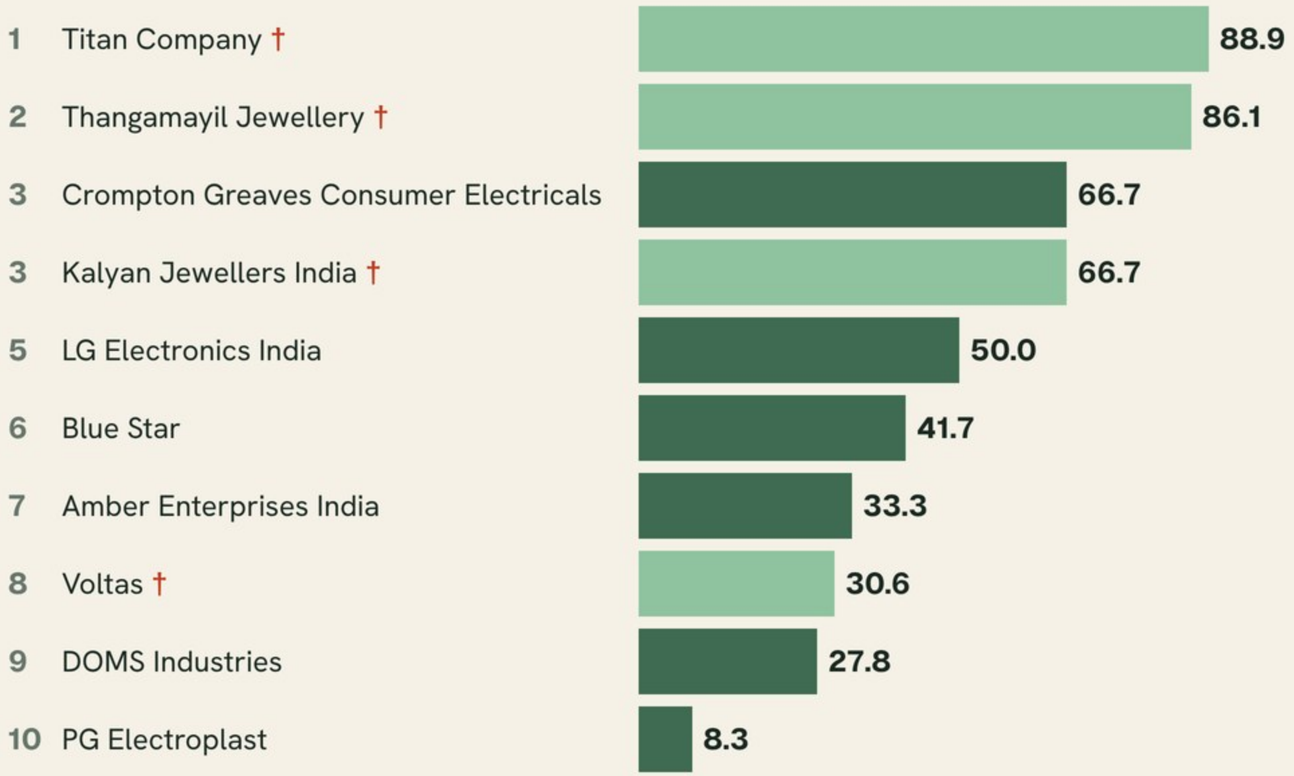
Land: no company gives a company-wide figure, despite quarry-based operations. The 10 companies list 6 sites, and none reports mining-lease area in its BRSR.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

The three gold jewellers take the top three places, and all three carry naming cautions. Crompton Greaves is the highest-ranked like-for-like company (joint 3rd, 66.7).

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ · † check before naming · 10 ranked of 10 · Highest-ranked like-for-like: Crompton Greaves Consumer E… (#3)



TAKEAWAYS

01 Titan (88.9), Thangamayil (86.1) and Kalyan Jewellers (66.7, joint 3rd) carry reviewed cautions: CNPI treats jewellery as unlike appliance and electronics making. Gold's high value lifts their per-rupee scores; revenue and score correlate at 0.59, second to insurers among the 24 groups.

02 Climate intensity spans 71 times: 0.32 tCO2e per ₹ crore at Titan, 23.0 at DOMS Industries, a stationery maker that also ranks last on energy.

03 Offsets add little. The median renewable share is 6.4% (Titan highest at 40.9%), 3 of 10 recover at least 90% of their waste, and no company moves three or more places from gross to net. Kalyan reported water use as a flat 20% of withdrawal, so CNPI scores it on withdrawal.

04 Voltas (22.0%), Amber (17.3%) and LG Electronics (15.1%) emit 54% of the group's Scope 1+2. Blue Star and PG Electroplast hold 65% of its unrecovered waste.

05 Voltas (8th) carries a naming caution. Its Scope 1 of 78,684 t equals 0.53 t per GJ of non-renewable energy; burning fuel gives at most about 0.1. Refrigerant leaks counted in Scope 1 would explain the gap, and Voltas should show them as a separate line.

Greenhouse-gas intensity varies 71× across the 10 ranked companies

Each dot is one ranked company's net pressure per ₹ crore of revenue (log scale). Dashed line: median. A log scale cannot show zeros or full offsets.

EXCLUSION LIST · NONE: ALL 10 MEMBERS ARE RANKED

Lower = less reported pressure per ₹ of revenue. Compare companies within this group.

† CHECK BEFORE NAMING

Illustrative nature cost: a median 2.29% of EBITDA (middle half 1.19–7.00%; 0.197% of revenue); by pressure, carbon 73%, water scarcity 22%, energy depletion 5%

Each dot: one company's cost for one pressure as % of its EBITDA (log scale); black tick = median. Price set B, central. Hollow dot = EBITDA under 5% of revenue (unstable). The cost stays out of the rank, and we do not add companies.

SHARE OF THE GROUP'S COSTED TOTAL, BY PRESSURE

AIR POLLUTION

4 of 10 companies report air emissions in tonnes: fewer than 8 usable, so no air rank.

WHERE REPORTING MUST IMPROVE

Air: 4 of 10 report in tonnes, too few for an air rank.

Voltas and the other air-conditioner makers should split Scope 1 into fuel and refrigerant (fugitive) emissions.

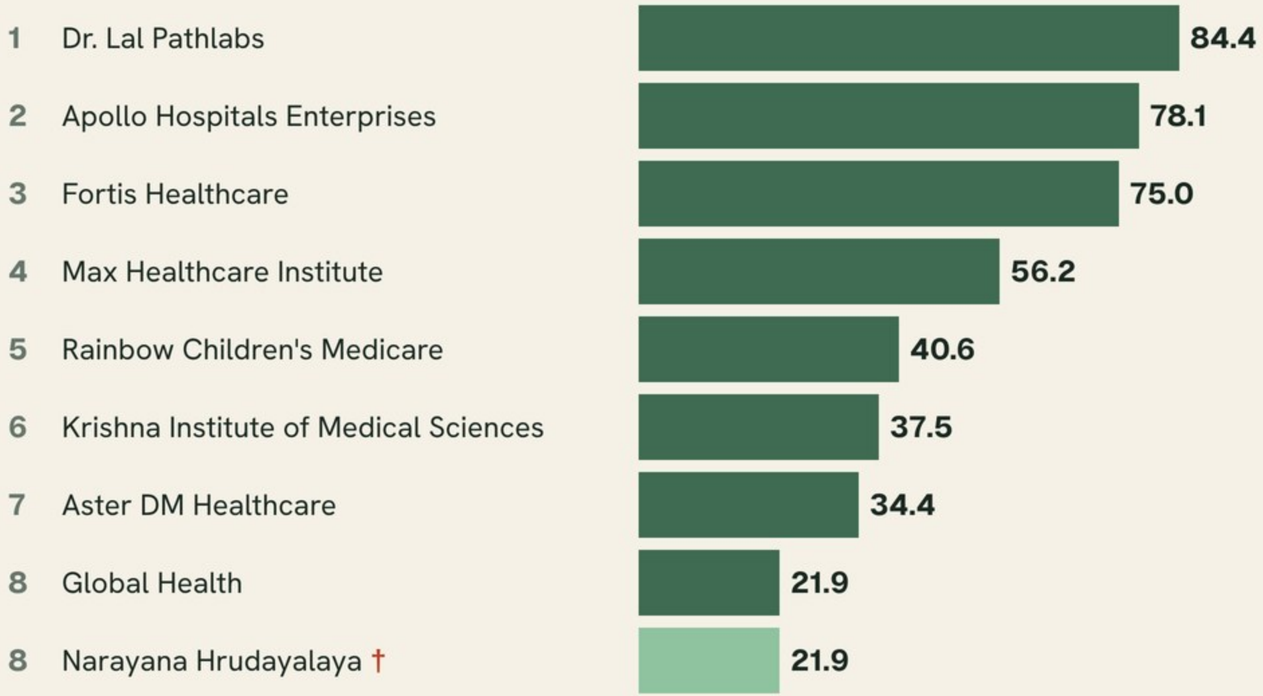
Land: no company gives a land figure. Companies list 7 sites, none with coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Hospitals sit close together (2.5 times on climate), so one value can move a rank. No hospital recovers most of its waste.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ † check before naming 9 ranked of 10 · Highest-ranked like-for-like: Dr. Lal Pathlabs (#1)



TAKEAWAYS

01 Climate intensity runs from 4.9 tCO2e per ₹ crore (Apollo Hospitals) to 12.2 (Narayana Hrudayalaya); energy spans 2.5 times. Narayana and Global Health tie for last (21.9).

02 The median hospital recovers 18% of its waste, and none reaches 90%. Indian rules require hospitals to treat and dispose of biomedical waste, which limits recycling.

03 Dr Lal PathLabs, a diagnostics chain, is the highest-ranked like-for-like company (84.4, 1st), with the lowest energy and water intensity. Apollo ranks highest among in-patient hospitals (78.1) while emitting 27.5% of the group's Scope 1+2.

04 Scope 2 makes up a median 89% of emissions; renewables a median 20% (Narayana highest, 36%). Rainbow Children's Medicare returns 43% of its water and climbs from 7th on gross figures to 5th net.

05 Water shows the widest spread, 4.6 times (Dr Lal 51.5, Aster DM 239 kL per ₹ crore). Aster DM scores zero on water.

Not ranked here: 1 (Dr. Agarwal's Health…); reasons on the next slide and in the dataset.

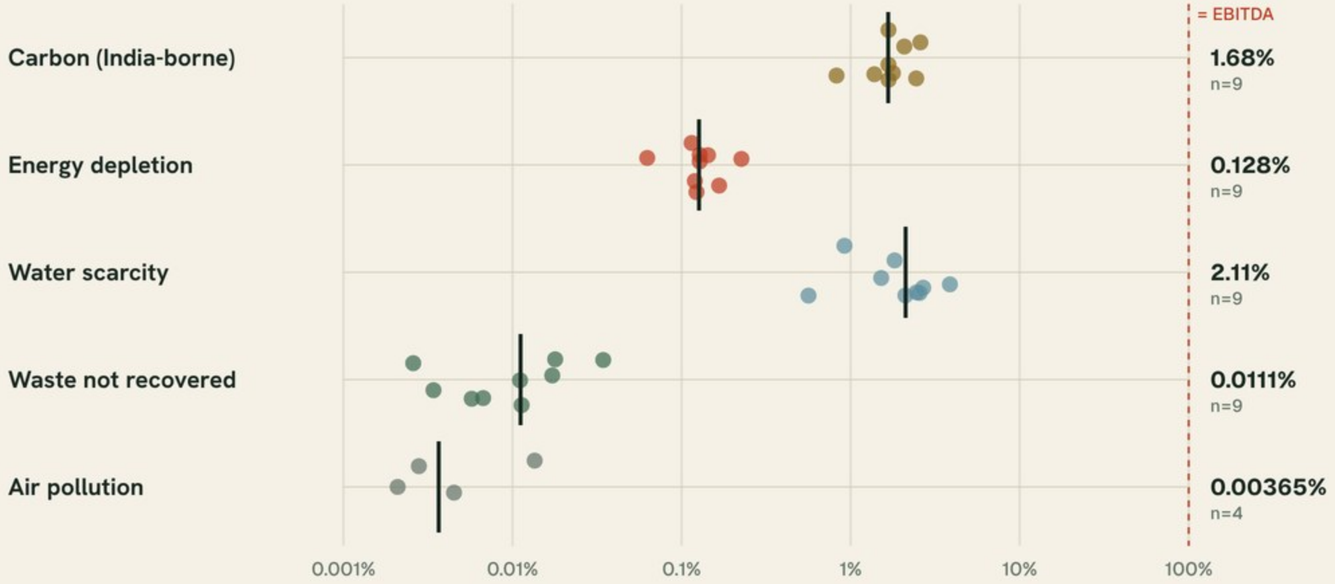
Dr. Agarwal's Health Ca... NOT REPORTED not reported: climate, energy, water, waste

Lower = less reported pressure per ₹ of revenue. Compare companies within this group.

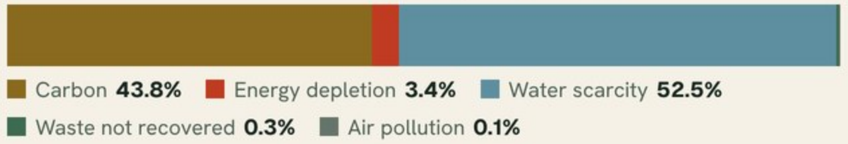
† CHECK BEFORE NAMING

Illustrative nature cost: a median 4.27% of EBITDA (middle half 3.43–4.79%; 1.04% of revenue); by pressure, water scarcity 53%, carbon 44%, energy depletion 3%

Each dot: one company's cost for one pressure as % of its EBITDA (log scale); black tick = median. Price set B, central. Hollow dot = EBITDA under 5% of revenue (unstable). The cost stays out of the rank, and we do not add companies.



SHARE OF THE GROUP'S COSTED TOTAL, BY PRESSURE



AIR POLLUTION

5 of 10 companies report air emissions in tonnes: fewer than 8 usable, so no air rank.

WHERE REPORTING MUST IMPROVE

CNPI holds back Apollo Hospitals' air figure, 3,200 times the peer median, as a probable unit or boundary error.

Narayana Hrudayalaya (joint 8th) carries a naming caution: its Scope 1 of 21,898 t is more than its reported fuel could emit. Dr Agarwal's Health Care reports none of the four pressures, and 5 of 9 report air.

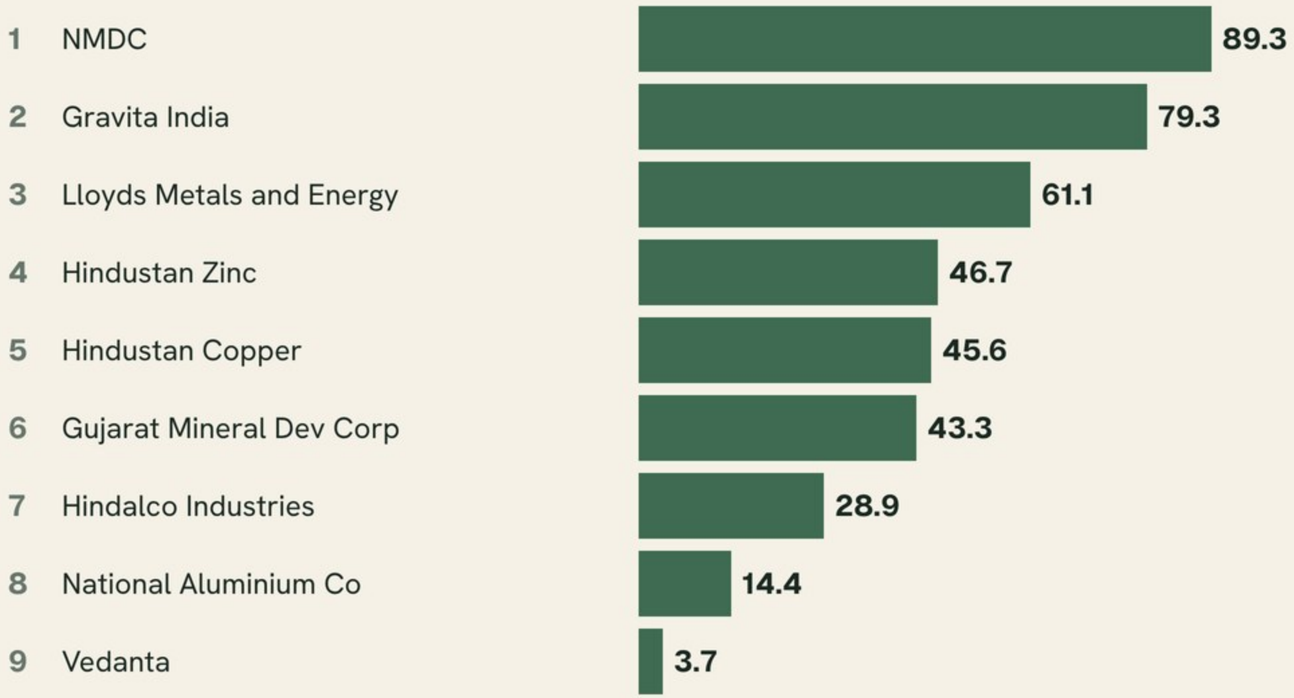
Land: no company gives a land figure. Companies list 14 sites (19.2 ha), none with coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Smelters drive this group's intensity. The three companies with aluminium smelters (Hindalco, NALCO, Vedanta) rank 7th to 9th and emit 94% of the ranked group's Scope 1+2.

Score 0–100: average of climate, energy and water scores · higher = lower pressure per ₹ 9 ranked of 13 · Highest-ranked like-for-like: NMDC (#1)



TAKEAWAYS

01 Climate intensity spans 145 times, from 6.3 tCO2e per ₹ crore (NMDC, iron ore) to 910.9 (Vedanta). Water spans 192 times, from 27 kL per ₹ crore (Gravita) to 5,275 (Hindustan Copper).

02 Vedanta (61.8%), Hindalco (21.9%) and NALCO (10.0%) emit 93.8% of the ranked group's Scope 1+2 and use 93.7% of its non-renewable energy. Vedanta uses 57.3% of the group's water.

03 Offsets make no real difference. The median renewable share is 0.8% (Hindustan Zinc highest, 6.0%), and Scope 2 makes up a median 10% of emissions. Gross and net ranks correlate at 0.98 on the three scored pressures.

04 CNPI holds back Coal India: its Scope 2 (7.7 million t) implies more grid electricity than 1.5 times its total reported energy. Nine companies remain ranked, and NMDC is the highest-ranked like-for-like company (89.3).

05 This group gives the strongest land evidence of any industrial group. Vedanta reports 64,979 ha across 46 sites (FY2025-26 biodiversity assessment) and BCCL 16,390 ha (FY2024-25); Lloyds Metals' 348 ha covers one mining lease. None of the 12 listed sites carries a sensitive-area statement.

Not ranked here: 4 (Coal India, Vedanta Aluminium Met…, Bharat Coking Coal, Jain Resource Recycli…); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 145× across the 9 ranked companies

Coal India HELD BACK — climate: Scope 2 implies more grid electricity than 1.5x the company's total reported energy

Jain Resource Recycling HELD BACK — water: value far below peer median, possibly under-reported or head-office only (1/...

Bharat Coking Coal NOT REPORTED — not reported: climate, energy, water

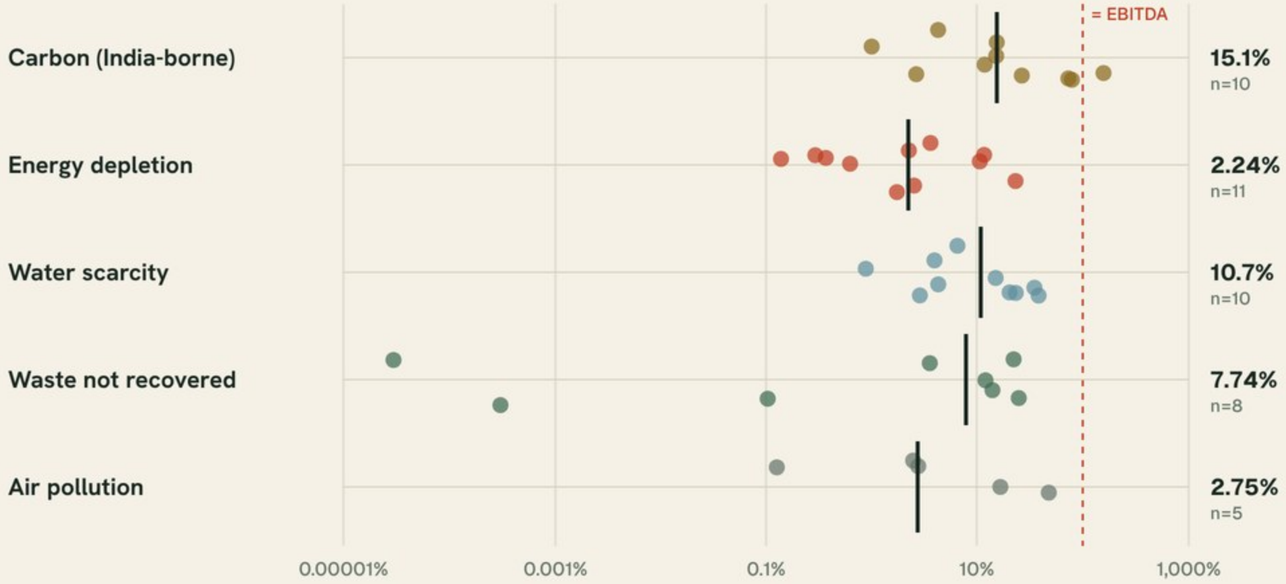
Vedanta Aluminium Metal REVENUE YEAR — revenue period or boundary does not match the BRSR year

Lower = less reported pressure per ₹ of revenue. Compare companies within this group.

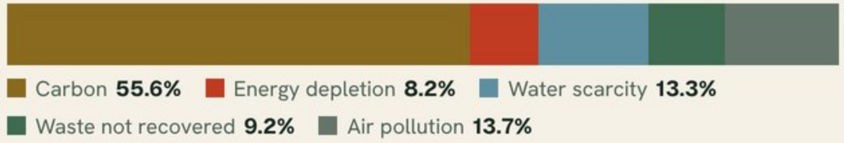
† CHECK BEFORE NAMING

Illustrative nature cost: a median 30.4% of EBITDA (middle half 19.6–105%; 12.9% of revenue); by pressure, carbon 56%, air pollution 14%, water scarcity 13%

Each dot: one company's cost for one pressure as % of its EBITDA (log scale); black tick = median. Price set B, central. Hollow dot = EBITDA under 5% of revenue (unstable). The cost stays out of the rank, and we do not add companies.



SHARE OF THE GROUP'S COSTED TOTAL, BY PRESSURE



AIR POLLUTION

5 of 13 companies report air emissions in tonnes: fewer than 8 usable, so no air rank.

WHERE REPORTING MUST IMPROVE

Companies report overburden and tailings on such different bases that CNPI cannot score pollution. GMDC (69 t) and Jain Resource Recycling report waste about 1/10,000 to 1/600 of the median.

Coal India should reconcile its Scope 2 with its energy table. CNPI holds back Jain Resource Recycling's water figure; BCCL reports no climate, energy or water data, and Vedanta Aluminium Metal has no matching revenue year.

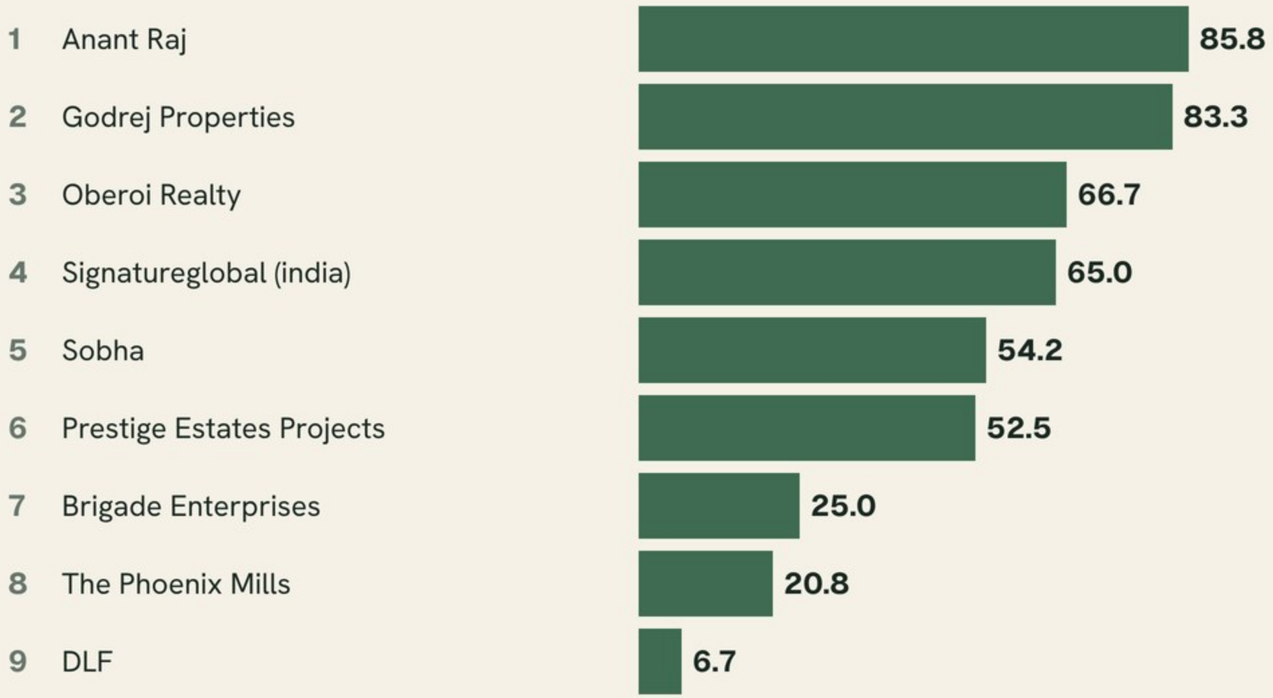
Air: 5 of 9 report in tonnes. None of the 12 sites has coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

With pollution unscored, Anant Raj is the highest-ranked like-for-like company and DLF ranks last. Real estate gives the best land disclosure of any group: 6 of 12 report land banks.

Score 0–100: average of climate, energy and water scores · higher = lower pressure per ₹ 9 ranked of 12 · Highest-ranked like-for-like: Anant Raj (#1)



TAKEAWAYS

01 CNPI does not score pollution here because developers report construction waste on different bases: DLF reports 236,462 t generated, Anant Raj 0.74 t. Anant Raj leads the like-for-like ranking (85.8), ahead of Godrej Properties (83.3) and Oberoi Realty (66.7).

02 DLF ranks last (6.7). It emits 41.5% of the group's Scope 1+2 and uses 53.3% of its water. Its unscored waste (27.3 t per ₹ crore, 5.5% recovered) makes up 82% of the group's unrecovered waste.

03 Climate intensity spans 25 times (Godrej Properties 0.93, DLF 23.3 tCO2e per ₹ crore) and water 26 times (Oberoi 33.6, DLF 873 kL).

04 Six companies report land banks: Lodha 1,578 ha, Sobha 709, Prestige 393, Brigade 223, Signatureglobal 193 and Anant Raj 130. These figures count land held for development.

05 Larger developers rank worse (correlation between revenue and score −0.32). The median renewable share is 8.7% (Prestige highest, 35%), and Scope 2 passes half of emissions for all nine.

Not ranked here: 3 (Lodha Developers, Prime Focus, Aditya Birla REAL Est…); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 25× across the 9 ranked companies

Prime Focus HELD BACK climate: Scope 2 implies an electricity bill larger than revenue (physically impossible)

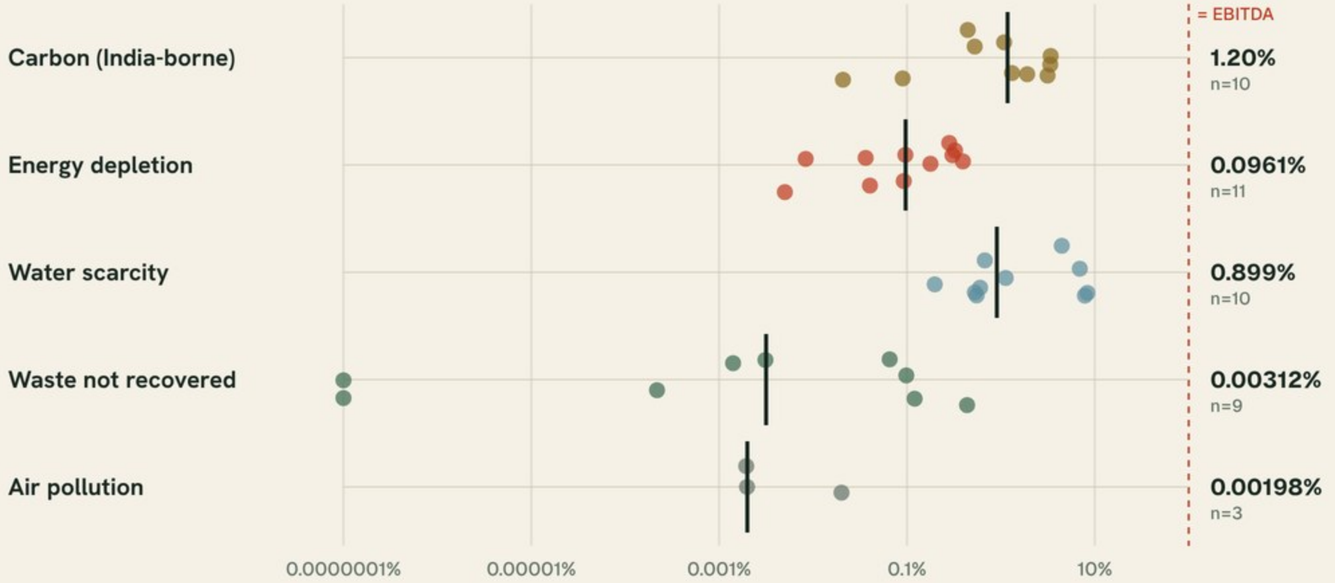
Lodha Developers ZERO TO CONFIRM reported zero (to confirm): Scope 1 or Scope 2 component of climate

Lower = less reported pressure per ₹ of revenue. Compare companies within this group.

† CHECK BEFORE NAMING

Illustrative nature cost: a median 2.16% of EBITDA (middle half 0.827–9.72%; 0.575% of revenue); by pressure, water scarcity 64%, carbon 31%, energy depletion 3%

Each dot: one company's cost for one pressure as % of its EBITDA (log scale); black tick = median. Price set B, central. Hollow dot = EBITDA under 5% of revenue (unstable). The cost stays out of the rank, and we do not add companies.



SHARE OF THE GROUP'S COSTED TOTAL, BY PRESSURE

AIR POLLUTION

5 of 12 companies report air emissions in tonnes: fewer than 8 usable, so no air rank.

WHERE REPORTING MUST IMPROVE

CNPI holds back Prime Focus, whose Scope 2 implies an electricity bill larger than its revenue, and Aditya Birla Real Estate (climate 345 and energy 814 times the median). Aditya Birla Real Estate also carries a reviewed caution: its pulp-and-paper footprint does not match the group.

Lodha stays unranked. It reports zero Scope 2 with 84% renewable electricity, below the 90% CNPI needs to accept a zero.

Air: 3 of 9 report. None of the 11 listed sites has coordinates.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

InterGlobe Aviation emits 78% of the group's Scope 1+2 yet ranks 3rd. CNPI scores the airline on water and waste against ports and couriers.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ 8 ranked of 10 · Highest-ranked like-for-like: GMR Airports (#1)

TAKEAWAYS

01 InterGlobe emits 77.6% of the group's Scope 1+2 and uses 79.8% of its non-renewable energy. It ranks 6th of the 9 companies scored on climate, first on water, and 3rd overall (58.9).

02 Dropping any one pressure can move ranks a lot (minimum leave-one-out rank correlation 0.81, the lowest of all groups). Revenue-based and profit-based views agree at 0.43, also the lowest.

03 The two shipping lines rank last (Shipping Corporation 7th, Great Eastern 8th). Great Eastern has the highest climate intensity, 221.6 tCO2e per ₹ crore, 85 times GMR Airports' 2.6.

04 GMR Airports is the highest-ranked like-for-like company (78.1, 1st). It draws 83.2% of its energy from renewables, the one member above half. Blue Dart ranks 2nd (64.7).

05 Adani Ports uses 62.1% of the group's water, scores zero on water and drops from 3rd on gross figures to 5th net. Delhivery reported water use as a flat 20% of withdrawal; CNPI scores it on withdrawal, and it ranks 6th.

Not ranked here: 2 (Container Corp of Ind..., AEGIS VOPAK Terminals); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 86× across the 8 ranked companies

AIR POLLUTION

5 of 10 companies report air emissions in tonnes: fewer than 8 usable, so no air rank.

WHERE REPORTING MUST IMPROVE

CNPI holds back Container Corporation's waste figure (1/2,500 of the median). Aegis Vopak Terminals reports no pressures.

Air: 5 of 8 report; CNPI holds back GMR's air figure.

Land: JSW Infrastructure gives the one company-wide figure (1,303 ha), though ports and airports occupy large areas. Adani Ports' Mundra statement puts the nearest bird sanctuary 48 km away.

An illustration of scale for this sector, with no legal or accounting meaning.

DASHED LINE = COST EQUAL TO EBITDA

Government wholesale lenders take the top three places: REC, the highest-ranked like-for-like company, then PFC and IRFC. A per-rupee yardstick favours large loan books run from few offices.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ 29 ranked of 33 · Highest-ranked like-for-like: REC (#1)

TAKEAWAYS

01 IRFC's climate intensity (0.0055 tCO2e per ₹ crore) is 357 times below IFCI's (1.95). Branch-heavy retail lenders fill the bottom: the microfinance lender CreditAccess Grameen (28th) and the gold-loan company Manappuram (29th, 7.3).

02 Water intensity spans 2,176 times (IRFC 0.059, CreditAccess 128.8 kL per ₹ crore), the widest of any group.

03 Eleven of 29 report recovering all their waste. Those 11 tie on a pollution score of 82.3, so the pressure separates few companies.

04 Eight lenders, including PFC (2nd) and IRFC (3rd), reported water use as a flat 20% of withdrawal; CNPI scores them on withdrawal. CreditAccess Grameen and Manappuram belong to this set and rank last.

05 This group has the least concentrated footprint: the top three emitters (Muthoot 16.1%, Shriram 11.4%, Cholamandalam 10.6%) hold 38%. The median renewable share is 0.1%; L&T Finance draws 74.8%.

Operational footprint: offices, branches and data centres. Lending, investing and insuring sit outside it. Not ranked here: 4 (Bajaj Finance, Bajaj Finserv, Authum Inv & Infra, Home First Finance Co…); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 357× across the 29 ranked companies

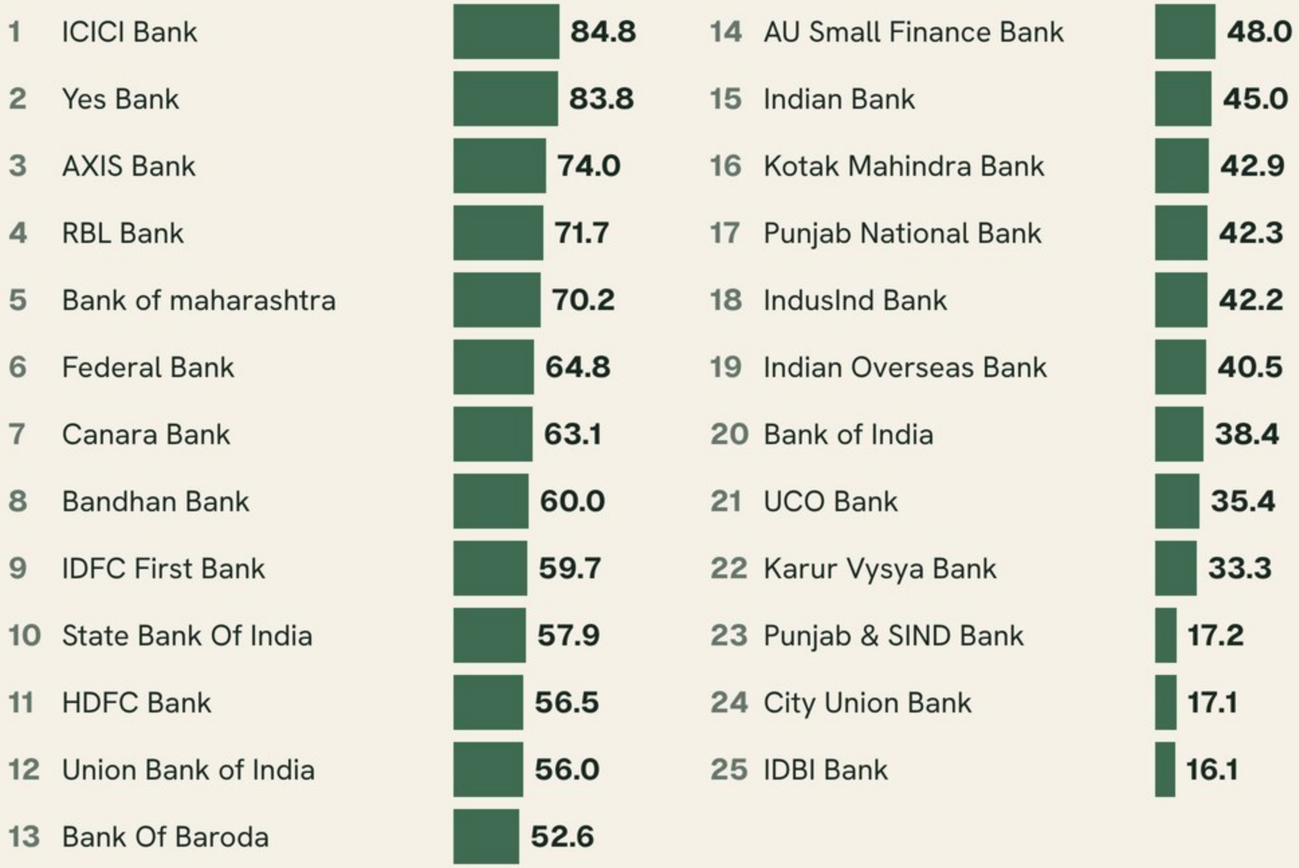
Bajaj Finance	HELD BACK	water: water consumed more than 10x water withdrawn
Bajaj Finserv	HELD BACK	water: water consumed more than 10x water withdrawn
Home First Finance Co I...	NOT REPORTED	not reported: waste
Authum Inv & Infra	ZERO TO CONFIRM	reported zero (to confirm): waste, Scope 1 or Scope 2 component of cl...

WHERE REPORTING MUST IMPROVE

- CNPI holds back Bajaj Finance and Bajaj Finserv: each reports water consumption more than 10 times its withdrawal. Home First reports no waste, and Authum reports zeros.
- Lenders should measure water discharge and stop assuming it.
- Air: 5 of 29 report. All 33 members report office sites and no other land, and none discloses financed exposure to land use.

Banks' own footprints are small and close together. ICICI Bank is the highest-ranked like-for-like bank, and CNPI scores six banks that assumed 80% water discharge on withdrawal.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ 25 ranked of 27 · Highest-ranked like-for-like: ICICI Bank (#1)



TAKEAWAYS

01 Climate intensity spans 34 times (Bandhan 0.09, Punjab & Sind 3.02 tCO2e per ₹ crore); the middle half sits between 1.02 and 1.65. Scope 2 makes up a median 94% of emissions. ICICI Bank draws the most renewable energy, at 29.7% (median 1.8%).

02 Six banks reported water use as a flat 20% of withdrawal, assuming 80% goes out as discharge. CNPI scores them on withdrawal: HDFC Bank (11th), Federal (6th), IndusInd (18th), Karur Vysya (22nd), RBL (4th) and Punjab & Sind (23rd).

03 Water and climate scores show no link (rank correlation −0.07). Bandhan ranks first on climate and energy, last on water (32.9 kL per ₹ crore), and 8th overall. Axis Bank has the lowest water intensity (1.33 kL) and ranks 3rd.

04 SBI emits 24.3% of the group's Scope 1+2 and ranks 10th. ICICI (84.8) is the highest-ranked like-for-like bank, ahead of Yes Bank (83.8) and Axis (74.0). Kotak returns 76% of its water and gains the most from offsets, climbing from 23rd on gross figures to 16th net.

05 Revenue-based and profit-based ranks correlate at 0.52, the second-lowest of any group. For banks, the choice of yardstick moves the result.

Operational footprint: offices, branches and data centres. Lending, investing and insuring sit outside it. Not ranked here: 2 (Central Bank of India, Jammu and Kashmir Bank); reasons on the next slide and in the dataset.

Greenhouse-gas intensity varies 34× across the 25 ranked banks

EXCLUSION LIST · 2 OF 27 MEMBERS NOT RANKED

Central Bank of India HELD BACK energy: value far below peer median, possibly under-reported or head-...

Jammu and Kashmir Bank HELD BACK water: value far below peer median, possibly under-reported or head-o...

WHERE REPORTING MUST IMPROVE

- Water: banks should meter discharge. Six applied a fixed 80% return instead, and CNPI scores them on withdrawal.
- CNPI holds back Central Bank of India's energy figure (near zero) and Jammu & Kashmir Bank's water figure (1/769 of the median).
- Banks do not report financed emissions or the land exposure of their loan books, so their main nature impact is missing. City Union Bank states that it runs branches in 'ecologically sensitive areas'.

CNPI cannot yet rank a third of the group. Among the ranked, exchanges and depositories run data centres and carry most of the footprint; BSE ranks last.

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ 12 ranked of 18 · Highest-ranked like-for-like: 360 ONE WAM (#1)

TAKEAWAYS

01 Six of 18 members stay unranked. CNPI holds back two values (Aditya Birla Sun Life AMC's climate figure, Choice International's energy figure), three firms report zeros or gaps, and CRISIL reports on a calendar year.

02 BSE emits 29.7% of the group's Scope 1+2, holds 64.6% of its unrecovered waste and ranks 12th of 12. Its climate intensity (3.42 tCO2e per ₹ crore) is 88 times Angel One's (0.039).

03 The 12 ranked companies emit 51,323 tCO2e combined, about a tenth of Asahi India Glass's Scope 1+2. Scope 2 makes up a median 92% of the total.

04 Four members (BSE, HDFC AMC, JM Financial and the unranked Nuvama) reported water use as a flat 20% of withdrawal; CNPI scores them on withdrawal. JM Financial ranks 3rd and BSE last.

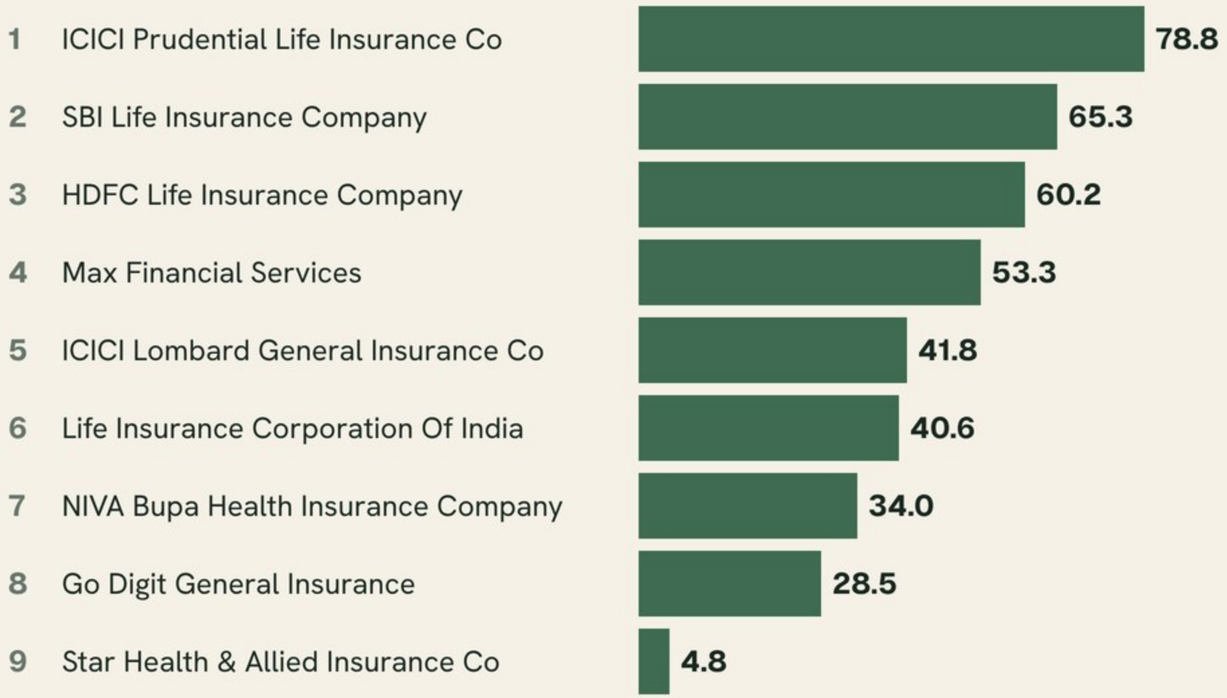
WHERE REPORTING MUST IMPROVE

- Reported zeros and missing waste data keep three firms out (ICICI Prudential AMC, Anand Rathi Wealth, Nuvama). Choice International also carries a waste value 110 times below the median.
- Firms should measure water discharge and stop assuming 80%.

Operational footprint: offices, branches and data centres. Lending, investing and insuring sit outside it. Not ranked here: 6; Aditya Birla Sun Life… (held back); Choice International (held back); Anand Rathi Wealth (zero to confirm); ICICI Prudential Asse… (zero to confirm); Nuvama Wealth Mgmt (zero to confirm); CRISIL (revenue year)

Insurers' climate intensity varies 3.1 times, so water and waste decide the ranks. Larger insurers rank higher (revenue–score correlation 0.63, the strongest of any group).

Score 0–100: average of climate, energy, water and pollution scores · higher = lower pressure per ₹ 9 ranked of 12 · Highest-ranked like-for-like: ICICI Prudential Life Insur… (#1)



TAKEAWAYS

01 Climate intensity runs from 0.10 tCO2e per ₹ crore (ICICI Prudential Life) to 0.31 (Star Health). Water spans 60 times and waste far more, so those two pressures sort the table.

02 LIC emits 64.5% of the group's Scope 1+2, uses 73.7% of its non-renewable energy and ranks 6th. CNPI measures its revenue as gross premium income (₹536,749 crore).

03 CNPI holds back Canara HSBC Life: its Scope 2 (1,765 tCO2e) is 8.6 times what its reported energy (1,037 GJ) could emit at the 0.71 t/MWh grid factor. Nine insurers remain ranked, one above the minimum of eight.

04 One of nine ranked insurers reports returning any water. Three report zero unrecovered waste, and none reports air in tonnes.

WHERE REPORTING MUST IMPROVE

- Canara HSBC Life should reconcile its energy and Scope 2 figures.
- GIC Re and New India Assurance stay unranked because they report zero waste. Niva Bupa's sensitive-area answer repeats the BRSR question.

Operational footprint: offices, branches and data centres. Lending, investing and insuring sit outside it. Not ranked here: 3; Canara HSBC Life Insu… (held back); General Insurance Cor… (zero to confirm); The New India Assuran… (zero to confirm)

5 groups have too few complete members to rank; their data stay in the dataset

Size decides it: the 500 hold too few companies of these kinds for a fair comparison.

Telecom & Media

8

members; a group needs 8 with complete, clean data

seven of eight members have data, one short of the eight CNPI needs. Indus Towers emits 91% of the group's Scope 1+2.

Textiles & Apparel

7

members; a group needs 8 with complete, clean data

the group has seven members. Grasim's cellulosic-fibre business emits 71% of the group's Scope 1+2.

Investment & Holding Cos

6

members; a group needs 8 with complete, clean data

six holding companies whose filings hold reported zeros for most pressures.

Building Products

4

members; a group needs 8 with complete, clean data

the group has four members. Kajaria Ceramics emits 53.5% of the group's Scope 1+2 and uses 69% of its non-renewable energy.

Diversified

1

members; a group needs 8 with complete, clean data

Adani Enterprises is the only member.

Telecom & Media misses by one company: IndiaMART reports a zero Scope 1 that awaits confirmation.

Companies report climate, energy and waste; they omit the basis behind each figure

Climate (GHG)

MEDIUM GAP

A REAL INDEX NEEDS

Scope 1 by source (combustion/process/fugitive); Scope 2 location- AND market-based with grid factor version; GHG consolidation approach matched to revenue boundary; Scope 3 by category (tCO2e; company, site for large emitters)

BRSR TODAY

EI 7: Scope 1 and Scope 2 totals + intensities; LI 2: Scope 3 (voluntary). No method, factor, boundary or source split

WHAT THE 500 SHOW

S1+S2 473/500 (13 with an unconfirmed zero component); Scope 2 method stated 16/465; implied factor = CEA FY25 0.71 for 286/433; 42 fail Scope 2 vs electricity test (3 now held back by the 1.5x-energy rule, 34 still ranked); Scope 3 positive in a clear unit 126/465

THE ONE ASK

State the Scope 2 method and grid-factor version (report location-based and market-based separately) and the GHG consolidation boundary

Standards: IFRS S2 (location-based Scope 2 required); ESRS E1-6; GRI 305-1..3 (GRI 102 from 2027)

Energy

MEDIUM GAP

A REAL INDEX NEEDS

Fuel by type (GJ); grid electricity purchased (MWh); captive generation with the fuel already counted; renewable split on-site / contracted / certificate; biomass with source (company, site)

BRSR TODAY

EI 1: electricity, fuel, other; renewable vs non-renewable; intensities. No captive-vs-grid or fuel-type split

WHAT THE 500 SHOW

473/500; electricity/fuel split 461/465; 10 XBRL totals wrong by 10^3-10^12 vs PDF; 38 values for 13 companies hand-corrected; captive generation identifiable in 0

THE ONE ASK

Report grid-purchased and self-generated electricity on separate lines, naming the fuel already counted for self-generation

Standards: GRI 302 (GRI 103 from 2027); ESRS E1-5; BRSR Core energy footprint

Waste incl. hazardous

MEDIUM GAP

A REAL INDEX NEEDS

Generated by hazard class and stream; named mineral streams (fly ash, overburden, tailings, slag, C&D); diverted vs disposed by hazard class; stock recovery separate (t)

BRSR TODAY

EI 9: 8 categories incl. other hazardous; recovered (3 routes); disposed (3 routes); no stock line, no mineral-stream lines

WHAT THE 500 SHOW

472/500; hazardous category filled 57/57, positive in 43/57 (57-subset); 21 recover more than generated; 72/449 do not balance; pollution unscored in 4 groups (Power, Non-ferrous & mining, Construction & engineering, Real estate; e.g. Coal India 5.35 bn t vs GMDC 69 t)

THE ONE ASK

Report fly ash, overburden, tailings and slag as named lines, and recovery from stock separately from current-year arisings

Standards: GRI 306-3/4/5; ESRS E5-5; TNFD C2.2, C2.3; BRSR Core circularity

Water and air need location, pollutant loads and mass in tonnes

Water quantity

MEDIUM GAP

A REAL INDEX NEEDS

Withdrawal by source, discharge by destination, consumption = withdrawal - discharge (+/- storage), freshwater vs other (m3; site)

BRSR TODAY

EI 3: withdrawal by 5 sources + consumption; EI 4: discharge by destination and treatment (company only)

WHAT THE 500 SHOW

Consumption 473/500; consumption = withdrawal in 189/468 (49 of them with positive discharge); water balance fails >10% in 66/454; discharge > withdrawal in 2; 30 report consumption at a fixed 20% of withdrawal (scored on withdrawal in the final build)

THE ONE ASK

Compute consumption as withdrawal minus discharge (plus/minus storage) and report seawater separately from freshwater in the totals

Standards: GRI 303-3/4/5; ESRS E3-4; TNFD C3.0

Water source location and stress

HIGH GAP

A REAL INDEX NEEDS

Facility coordinates or district/basin; withdrawal and consumption per facility; stress class with named dataset (WRI Aqueduct or CGWB block); groundwater share

BRSR TODAY

LI 1 (voluntary): per-facility table for 'areas of water stress' with area name only; no coordinates, no definition of stress

WHAT THE 500 SHOW

Water-stress values 20/57 (57-subset); groundwater used by 36/57; facility coordinates 0 in BRSR; district known for 280/326 Hermes sites

THE ONE ASK

Make the water-stress facility table mandatory, with district and coordinates per facility and the stress dataset named

Standards: TNFD C3.0; GRI 303-3-b, 303-5-b; ESRS E3-4; SBTN freshwater (basin)

Wastewater and water/soil pollution

HIGH GAP

A REAL INDEX NEEDS

Discharge by receiving body; pollutant loads (BOD, COD, N, P, metals) in t/yr; treatment level; pollutants released to soil (site)

BRSR TODAY

EI 4: discharge volume by destination and treatment level; no loads, no soil releases

WHAT THE 500 SHOW

Discharge total 463/465 parsed; destination/treatment tags present 57/57 (57-subset); pollutant loads 0 (not asked); not used in CNPI

THE ONE ASK

Add annual pollutant loads (t/yr of COD, BOD, total N, total P) per discharge point, as already monitored under SPCB consents

Standards: TNFD C2.1, C2.0; GRI 303-4; ESRS E2-4

Air pollutants (non-GHG)

HIGH GAP

A REAL INDEX NEEDS

NOx, SOx, PM2.5/PM10, NMVOC, NH3 as annual mass (t/yr); sources covered; CEMS vs calculated (site)

BRSR TODAY

EI 6: NOx, SOx, PM, POP, VOC, HAP, others with 'please specify unit'; no mass rule, no PM size, no NH3

WHAT THE 500 SHOW

NOx+SOx+PM in tonnes 245/500 (178 ranked); 111 excluded for non-mass units; 10 firms with >1 Mt Scope 1 report no air tonnage

THE ONE ASK

Require NOx, SOx and PM in tonnes per year (annual mass), not concentrations

Standards: TNFD C2.4; GRI 305-7; ESRS E2-4

Land, biodiversity and the value chain are the three critical gaps

Land use and land-use change

CRITICAL GAP

A REAL INDEX NEEDS

Area owned/leased/mining lease; disturbed area; rehabilitated/restored area; conversion in the year by ecosystem type (ha); polygons for sites >=10 ha

BRSR TODAY

Section A: number of plants/offices only; EI 12: EIA list; no area field of any kind

WHAT THE 500 SHOW

Company-wide land total 13/500, plus 6 real-estate land banks and 7 figures for a partial boundary (77 with any figure); site area for 140 companies (252 sites); coordinates for 10 sites; disturbed or converted area 0 as standard fields

THE ONE ASK

Add a land table: hectares owned, leased and under mining lease, plus area disturbed and restored in the year, on the BRSR boundary

Standards: TNFD C1.0, C1.1; GRI 101-5; SBTN Land (no conversion, footprint, landscape)

Biodiversity: sensitive sites and state of nature

CRITICAL GAP

A REAL INDEX NEEDS

Site coordinates/polygon; overlap or distance to PAs, KBAs, Ramsar, ESZ, tiger reserves (named dataset); natural ecosystem extent and condition change; threatened species; restoration (site)

BRSR TODAY

EI 11: free-text table of operations in/around ecologically sensitive areas (no coordinates, distance or area); LI 3 (voluntary): impact narrative

WHAT THE 500 SHOW

Hermes: 87 sensitive-area answers from 59 companies, mostly denials or blank; 13 companies state a site is in or near a sensitive area; coordinates for 10 of 326 sites

THE ONE ASK

Give coordinates (polygon for sites of 10 ha or more) and area for every operating site, so overlap with protected areas and KBAs can be screened independently

Standards: TNFD C5.0-C5.2; GRI 101-5, 101-7 (formerly 304-1, 304-4); ESRS E4-5; SBTN Step 1

Value chain: commodities and Scope 3

CRITICAL GAP

A REAL INDEX NEEDS

Tonnes of high-impact natural commodities by type and origin; share certified; Scope 3 by category

BRSR TODAY

LI 2: Scope 3 (voluntary); Principle 2: % of inputs sourced sustainably (no tonnes, no origin)

WHAT THE 500 SHOW

Scope 3 positive in a clear unit 126/465; commodity tonnes by origin 0 (not asked)

THE ONE ASK

Report tonnes of high-impact natural commodities sourced by type and origin state/country, with share certified (TNFD C3.1)

Standards: TNFD C3.1; IFRS S2; ESRS E1-6; SBTN Step 1

Ten disclosures would make a full corporate nature index possible; three gaps are critical

PARAMETER	GAP	THE ONE ASK	ALIGNED STANDARDS
Climate (GHG)	MEDIUM	State the Scope 2 method and grid-factor version (report location-based and market-based separately) and the GHG consolidation boundary	IFRS S2 (location-based Scope 2 required); ESRS E1-6; GRI 305-1..3 (GRI 102 from 2027)
Energy	MEDIUM	Report grid-purchased and self-generated electricity on separate lines, naming the fuel already counted for self-generation	GRI 302 (GRI 103 from 2027); ESRS E1-5; BRSR Core energy footprint
Water quantity	MEDIUM	Compute consumption as withdrawal minus discharge (plus/minus storage) and report seawater separately from freshwater in the totals	GRI 303-3/4/5; ESRS E3-4; TNFD C3.0
Water source location and stress	HIGH	Make the water-stress facility table mandatory, with district and coordinates per facility and the stress dataset named	TNFD C3.0; GRI 303-3-b, 303-5-b; ESRS E3-4; SBTN freshwater (basin)
Wastewater and water/soil pollution	HIGH	Add annual pollutant loads (t/yr of COD, BOD, total N, total P) per discharge point, as already monitored under SPCB consents	TNFD C2.1, C2.0; GRI 303-4; ESRS E2-4
Waste incl. hazardous	MEDIUM	Report fly ash, overburden, tailings and slag as named lines, and recovery from stock separately from current-year arisings	GRI 306-3/4/5; ESRS E5-5; TNFD C2.2, C2.3; BRSR Core circularity
Air pollutants (non-GHG)	HIGH	Require NOx, SOx and PM in tonnes per year (annual mass), not concentrations	TNFD C2.4; GRI 305-7; ESRS E2-4
Land use and land-use change	CRITICAL	Add a land table: hectares owned, leased and under mining lease, plus area disturbed and restored in the year, on the BRSR boundary	TNFD C1.0, C1.1; GRI 101-5; SBTN Land (no conversion, footprint, landscape)
Biodiversity: sensitive sites and state of nature	CRITICAL	Give coordinates (polygon for sites of 10 ha or more) and area for every operating site, so overlap with protected areas and KBAs can be screened independently	TNFD C5.0-C5.2; GRI 101-5, 101-7 (formerly 304-1, 304-4); ESRS E4-5; SBTN Step 1
Value chain: commodities and Scope 3	CRITICAL	Report tonnes of high-impact natural commodities sourced by type and origin state/country, with share certified (TNFD C3.1)	TNFD C3.1; IFRS S2; ESRS E1-6; SBTN Step 1

Five disclosures would let CNPI score land and biodiversity

ASK 01

Land

Hectares owned, leased and under mining lease, plus area disturbed and restored in the year, on the BRSR boundary.

ASK 02

Sites

Coordinates (a polygon for sites of 10 ha or more) for every operating site, so overlap with protected areas can be screened.

ASK 03

Scope 2

State the basis: location-based and market-based, with the grid-factor version, and the GHG boundary.

ASK 04

Air

NOx, SOx and PM as annual mass in tonnes, in place of stack concentrations.

ASK 05

Water & waste

Measured discharge, seawater apart from freshwater; fly ash, overburden, tailings and slag as named lines, stock recovery apart.

Companies can correct any value with a page reference to their own published report.

Each of the 500 companies has a page with every number and its source

WEBSITE · DRAFT

vinaybale-collab.github.io/clbi

Search any of the 500 companies. Each page shows its rank, the score build-up, its intensity against peers, the illustrative nature cost, land evidence, and every data point with link, page and quote.

DATASET · EXCEL

CNPI_v1.2_Dataset.xlsx

42 sheets: a sheet per peer group, the exclusion list, full data lineage, offsets, peer-group evidence, output yardsticks, air, land evidence and sites, illustrative nature cost and prices, and a Calculations sheet that recomputes every rank with live formulas.

The methodology note v1.2 explains the index in plain language.

FOR DISCUSSION AT ILDC 2026

What would it take for India’s largest companies to report where their land is, and what it holds?

Urvara.Life × Landstack · Corporate Nature Pressure Index v1.2 · draft for review
